

CENSUS OF INDIA, 1931

VOLUME X

— • • • —

THE WESTERN INDIA STATES AGENCY

IN TWO PARTS

PART I—THE REPORT

PART II—THE STATISTICAL TABLES

BY

H. T. SORLEY, M.A.

PROVINCIAL CIVIL SERVICE

PROVINCIAL SUPERINTENDENT OF CENSUS OPERATIONS

BOMBAY PRESIDENCY

from May 27th till October 31st, 1932

with an Introduction by

A. H. DRACUP, B.A.

BOMBAY PROVINCIAL CIVIL SERVICE

PROVINCIAL SUPERINTENDENT OF CENSUS OPERATIONS

BOMBAY PRESIDENCY

up to May 26th, 1932

BOMBAY

PRINTED AT THE GOVERNMENT CENTRAL PRESS

1933

TABLE OF CONTENTS

PART I-REPORT

	PAGE
INTRODUCTION—(Written by A. H. DRACUP)	
1 Nature of the Volume	i
2 Western India States Agency and what it includes	i
3 Geographical and physical characteristics	i
4 Administrative arrangements	i
5 States and estates	ii
6 Units for Census purposes	ii
7 Method of taking the Census	ii
8 Tabulation	iii
9 Cost of the Census	iii
10 Acknowledgments	iv
CHAPTERS I to XII—(Written by H. T. SORLIY)	
CHAPTER I—DISTRIBUTION AND MOVEMENT OF THE POPULATION—	
1 Area dealt with	i
2 Statistics of population	i
3 Diagrams	2
4 Area and population	2
5 Density	3
6 Vital statistics	4
7 Variations in population by units	4
8 House and families	5
9 Family statistics	6
Subsidiary Table I—Showing distribution of population	7
II—Showing variations in density of population	8
III—Showing the average number of persons per house and the number of persons per square mile	9
IV—Showing variations of population by states, classified according to—	10
(a) actual figures	
(b) proportional figures	
CHAPTER II—POPULATION OF CITIES, TOWNS AND VILLAGES—	
1 Reference to statistics	11
2 Population by towns and villages	11
3 Summary of the urban figures	11
4 Religious distribution of the urban population	16
5 Comparative growth of the urban and rural population	16
6 Population of villages	16
Subsidiary Table I—Showing the distribution of the population between towns and villages	17
„ II—Showing the number per mille of each religion who live in towns	18
„ III—Showing the towns classified by population	19
„ IV—Showing miscellaneous information regarding principal towns	19
CHAPTER III—BIRTHPLACE AND MIGRATION—	
1 Reference to statistics	20
2 Nature of migration	20
3 Return of birthplaces	21
4 Details of birthplace	23
5 Emigration	24
6 Balance of migration	25
7 The natural population	25
Subsidiary Table I—Showing immigration	26
„ II—Showing emigration	26
„ III Showing migration between the Agency and other parts of India	27

CHAPTER IV—AGE—

1. Instructions to enumerators	25
2. Reference to statistics	25
3. Value of statistics	25
4. Adjustment of age-groups	25
5. General age distribution	25
6. General distribution by age	30
7. Age distribution by religion	32
8. Age composition compared for various Censuses for selected age-groups	34

Subsidiary Table I—Showing distribution of 10,000 of each sex in the Agency	34
II—Showing distribution of 10,000 of each religion (1881-1931)	36
III—Showing distribution of 10,000 of each sex in certain castes	40
IV—Showing proportion of children under 14 and of persons over 45 to those aged 14-45, in certain castes also of married females aged 14-45 per 100 females	41
" V—Showing proportion of children under 10 and of persons over 60 to those aged 15-40 also of married females aged 15-40 per 100 females	41
" V A—Showing proportion of children under 10 and of persons aged over 60 to those aged 15-40 and of married females aged 15-40 per 100 females in certain religions	42
VI—Showing variation in population at certain age-periods	42

CHAPTER V—SEX—

1. Reference to statistics	43
2. The accuracy of the statistics	43
3. General proportions of the sexes	43
4. Sex distribution in selected castes	46

Subsidiary Table I—Showing general proportions of the sexes per mille by States and Agencies	47
II—Showing number of females per thousand males at different age-periods by religions at each of the last three Censuses	48
" III—Showing number of females per 1,000 males at different age-periods by religions and Agencies	49
" IV—Showing number of females per 1,000 males for certain selected castes and tribes	50

CHAPTER VI—CIVIL CONDITION—

1. Reference to statistics	51
2. General summary	51
3. The prevalence of marriage	53
4. Child marriage and early marriage	53
5. The widowed population	54
6. Civil condition by religion	55
7. Civil condition by selected castes	56

Subsidiary Table I—Showing distribution by civil condition of 1,000 of each sex of each main religion and in each main age-period since 1881	57
II—Showing distribution by civil condition of 1,000 of each sex at certain ages and each main religion	59
III—Showing distribution by civil condition of 1,000 of each sex and religion	61
" IV—Showing proportion of the sexes by civil condition at certain ages for main religions	62
" " V—Showing distribution by civil condition of 1,000 of each sex at certain ages for selected castes	64

CHAPTER VII—INFIRMITIES—

1	Reference to statistics	67
2	Accuracy of Census statistics of infirmities	67
3	Comparison with other Censuses generally	67
4	Insanity	68
5	Deaf Mutism	68
6	Blindness	68
7	Leprosy	68

Subsidiary Table I—	Showing number afflicted per 100,000 of the population at each of the last five Censuses	69
„	II— Showing number afflicted per 100,000 of the population of each age period and number of females afflicted per one thousand males	70
„	III—Showing distribution of the infirms by age per 10,000 of each sex	71

CHAPTER VIII—OCCUPATION—

1	Statistics	72
2	Instructions	72
3	Difficulties in Census enumeration and compilation	73
4	The scheme of classification	74
5	Errors in the returns	74
6	Proportions of workers and non workers	74
7	Proportions of earners and working dependants in each class	77
8	Proportion of workers (principal earners and working dependants) in each class	77
9	Occupation in large towns and the rest of the Agency compared	79
10	Details of occupational sub classes	80
11	Occupations of women	84
12	Subsidiary earners	85

Subsidiary Table I (A)–	Showing general distribution of occupations between earners (principal occupation) and working dependants	86
„	II (B)—Showing general distribution of the subsidiary earners	88
„	„ II (A)—Showing distribution of earners and working dependants by sub classes, states and agencies	90
„	„ II (B)—Distribution of subsidiary earners by sub classes, states and agencies	91
„	III—Showing distribution of earners (principal occupations) and working dependants by sub classes in respect of each unit	92
„	„ IV—Showing selected occupations (workers of all kinds)	94
„	„ V—Showing occupation of selected castes (traditional occupation)	96

CHAPTER IX—LITERACY—

1	Definition of literacy and meaning of the statistics	98
2	Influences affecting literacy	98
3	Extent of literacy	98
4	Female literacy	100
5	Literacy by religion	102
6	Literacy by age groups	102
7	Literacy in selected castes	103
8	Literacy in English	104
9	Progress of English literacy since 1901	104

Subsidiary Table I—	Showing literacy by age, sex and religion	105
„	„ II—Showing literacy by age, sex and locality	106
„	„ III—Showing literacy by religion, sex and locality	107
„	„ IV—Showing literacy in English by age, sex and locality	108
„	„ V—Showing literacy by selected castes	109
„	„ VI—Showing progress of literacy since 1901	110

CHAPTER IV—AGE—

1. Instructions to enumerators	28
2. Reference to statistics	28
3. Value of statistics	28
4. Adjustment of age-groups	28
5. General age distribution	28
6. General distribution by age	30
7. Age distribution by religion	32
8. Age composition compared for various Censuses for selected age-groups	31

Subsidiary Table I—Showing distribution of 10,000 of each sex in the Agency	31
“ II—Showing distribution of 10,000 of each religion (1881-1931)	36
III—Showing distribution of 10,000 of each sex in certain castes	40
IV—Showing proportion of children under 14 and of persons over 45 to those aged 14-45 in certain castes also of married females aged 14-45 per 100 females	41
V—Showing proportion of children under 10 and of persons over 60 to those aged 15-40 also of married females aged 15-40 per 100 females	41
V A—Showing proportion of children under 10 and of persons aged over 60 to those aged 15-40 and of married females aged 15-40 per 100 females in certain religions	4
“ VI—Showing variation in population at certain age-periods	42

CHAPTER V—SEX—

1. Reference to statistics	43
2. The accuracy of the statistics	43
3. General proportions of the sexes	43
4. Sex distribution in selected castes	46

Subsidiary Table I—Showing general proportions of the sexes per mille by States and Agencies	47
II—Showing number of females per thousand males at different age-periods by religions at each of the last three Censuses	48
“ III—Showing number of females per 1,000 males at different age-periods by religions and Agencies	49
“ IV—Showing number of females per 1,000 males for certain selected castes and tribes	50

CHAPTER VI—CIVIL CONDITION—

1. Reference to statistics	51
2. General summary	51
3. The prevalence of marriage	53
4. Child marriage and early marriage	53
5. The widowed population	54
6. Civil condition by religion	55
7. Civil condition by selected castes	56

Subsidiary Table I—Showing distribution by civil condition of 1,000 of each sex of each main religion and in each main age-period since 1881	57
II—Showing distribution by civil condition of 1,000 of each sex at certain ages and each main religion	59
III—Showing distribution by civil condition of 1,000 of each sex and religion	61
“ IV—Showing proportion of the sexes by civil condition at certain ages for main religions	62
“ V—Showing distribution by civil condition of 1,000 of each sex at certain ages for selected castes	64

CHAPTER VII—INFIRMITIES—

1	Reference to statistics	67
2	Accuracy of Census statistics of infirmities	67
3	Comparison with other Censuses generally	67
4	Insanity	68
5	Deaf-Mutism	68
6	Blindness	68
7	Leprosy	68

Subsidiary Table I—	Showing number afflicted per 100,000 of the population at each of the last five Censuses	69
„ II—	Showing number afflicted per 100,000 of the population of each age period and number of females afflicted per one thousand males	70
„ III—	Showing distribution of the infirm by age per 10,000 of each sex	71

CHAPTER VIII—OCCUPATION—

1	Statistics	72
2	Instructions	72
3	Difficulties in Census enumeration and compilation	73
4	The scheme of classification	74
5	Errors in the returns	74
6	Proportions of workers and non workers	74
7	Proportions of earners and working dependants in each class	77
8	Proportion of workers (principal earners and working dependants) in each class	77
9	Occupation in large towns and the rest of the Agency compared	79
10	Details of occupational sub-classes	80
11	Occupations of women	84
12	Subsidiary earners	85

Subsidiary Table I (A)—	Showing general distribution of occupations between earners (principal occupation) and working dependants	86
„ I (B)—	Showing general distribution of the subsidiary earners	88
„ II (A)—	Showing distribution of earners and working dependants by sub-classes, states and agencies	90
„ II (B)—	Distribution of subsidiary earners by sub-classes, states and agencies	91
„ III—	Showing distribution of earners (principal occupations) and working dependants by sub-classes in respect of each unit	92
„ IV—	Showing selected occupations (workers of all kinds)	94
„ V—	Showing occupation of selected castes (traditional occupation)	96

CHAPTER IX—LITERACY—

1	Definition of literacy and meaning of the statistics	98
2	Influences affecting literacy	98
3	Extent of literacy	98
4	Female literacy	100
5	Literacy by religion	102
6	Literacy by age groups	102
7	Literacy in selected castes	103
8	Literacy in English	104
9	Progress of English literacy since 1901	104

Subsidiary Table I—	Showing literacy by age, sex and religion	105
„ II—	Showing literacy by age, sex and locality	106
„ III—	Showing literacy by religion, sex and locality	107
„ IV—	Showing literacy in English by age, sex and locality	108
„ V—	Showing literacy by selected castes	109
„ VI—	Showing progress of literacy since 1901	110

CHAPTER X—LANGUAGE—

1. Reference to statistics	112
2. Instructions	112
3. General features	112
4. Distribution of Gujarati	112
5. Distribution of Kachchhi	113
6. Distribution of Western Hindi	114
7. Distribution of minor languages	114
8. Bilingualism	115

Subsidiary Table I—Showing distribution of the total population by mother tongue and the number per mille speaking each of the languages enumerated	116
---	-----

11—Showing distribution of the total population for each unit by mother tongue and subsidiary languages and the proportions of speakers of each	117
---	-----

Summary of Imperial Table XV—Part II Bilingualism	118
---	-----

CHAPTER XI—RELIGION—

1. Reference to statistics	119
2. Instructions	119
3. General distribution	119
4. Main variations since 1921	119
5. Distribution of population in religions	120

Subsidiary Table I—Showing the general distribution of the population by religion	121
---	-----

II—Showing the distribution of the population of each unit by main religions	122
--	-----

III—Showing the actual number of and variations in the population by main religions since 1881	123
--	-----

IV—Showing the number of and variations in the Christian population since 1881	125
--	-----

V—Showing the distribution of the population by religion in urban and rural areas	126
---	-----

VI—Showing the distribution by religion of each 10,000 of the population	127
--	-----

CHAPTER XII—RACE, CASTE AND TRIBES—

1. Reference to statistics	130
2. Instructions	130
3. Accuracy of the return	130
4. The principal castes in the Agency	131
5. Variations in certain castes	133

MAPS AND DIAGRAMS

	Map of the Western India States Agency	<i>Frontispiece</i> Facing page
1	Proportional changes in the population of the Western India States Agency, 1881 to 1931	3
2	Diagram comparing the density of population of the Western India States Agency with densities of other Provinces and States, 1931	3
3	Densities of population of the states in the Western India States Agency, 1931	3
4	Variation in the urban and rural population of the Agency since 1901	13
5	Actual number of places of various sizes in the Agency since 1881	13
6	Variation in the urban population living in places of various sizes in the Agency since 1881	14
7	The proportions of the urban population by religion in certain states in the Western India States Agency	16
8	Map showing the proportion of the home born population in the states of the Western India States Agency	22
9	Distribution of every 1,000 persons by age periods the agency compared with Baroda State and the Bombay Presidency	30
10	Distribution of every 1,000 persons of each sex by age periods for main religions in the Agency	32
11	Sex proportions in the Agency compared with those in other Provinces and States	41
12	The number of females per 1,000 males in the Agency	44
13	The number of females per 1,000 males at different age periods in the Agency	44
14	The distribution of 1,000 of each sex in each religion by civil condition in the Agency	53
15	The proportion of married females under 10 (child marriage) and aged 10 to 15 (early marriage) to 1,000 total married females in the Agency	53
16	The number of widowed per mille of each sex by quinquennial age periods in the Agency	55
17	The number of cases of each infirmity per 100,000 persons at each age-period in the Agency (insanity, deaf mutism, blindness, leprosy)	68
18	Proportion per 100,000 of the population suffering from each infirmity in the Agency (insanity, deaf mutism, blindness, leprosy)	68
19	The proportion of working dependants to principal earners in the Agency	77
20	The distribution of the working population by occupation in the Agency	79
21	The proportion of female workers to male workers in the Agency	84
22	Map showing literates per mille of the total population in the Agency	98
23	The number of literates per mille of the population by religion in the Agency	103
24	The number of literate males in every 1,000 males in selected castes in the Agency	102
25	Linguistic map of the Agency showing important languages spoken as mother tongue and main bilingualism	112
26	Social map showing for each unit the percentage of those belonging to the most numerously represented religions in the Agency	119
27	Distribution of the population of the Agency by religion	120
28	Variation in the population of the Agency by main religions, the figures for 1881 being taken as 100	120
29	Map showing the numerical strength of the Hindu divisions in the Agency	131

23 Imperial Table	XVIII—Variation in Population of selected Tribes	30*
24 Imperial Table	XIX—European and Allied Races and Anglo-Indians by Race and Age	304
25 Imperial Table	XX—Notes and Table Summary figures for States	309

PROVINCIAL TABLES

26 Provincial Table	I—Area and Population of Thanas (Talukhs, etc.)	313
27 Provincial Table	II—Population of Agencies and States by Religion and Literacy	313

Note.—For Explanation of the paging of the Imperial and Provincial Tables see the Foreword to Part II of this volume.

WESTERN INDIA STATES AGENCY REPORT

INTRODUCTION

This volume, which is numbered Vol. X of the Census of India Series, deals with the area known as the Western India States Agency and its production marks the beginning of a new era in the Census literature of Kathiawar. Hitherto the figures relating to Kathiawar have been incorporated in the statistical volume of tables for the Bombay Presidency and any explanatory remarks which the figures called for were inserted in the General Report for the province of Bombay. As a result of the decision to relieve the Government of Bombay of direct political control over the group of Indian States in Kathiawar and to place these States in direct political relations with the Government of India a new situation was created and it was decided to regard this group of States as a separate province. In consequence of this decision the Imperial Tables for Kathiawar have been excluded from the volume of statistics prepared for the Bombay Presidency and are printed in a separate volume.

2. The Western India States Agency, as at present constituted, was created in October 1921 when the political control of the Government of Bombay ceased and direct relations with the Government of India through the Agent to the Governor-General began. The territory now incorporated in this Agency includes the area formerly known as Kathiawar and Cutch and the Palanpur Agencies.

3. **Geographical and physical characteristics**—Geographically the Western India States Agency extends from the 21st to the 25th degree of latitude north. For a more detailed description of the physical characteristics of the Agency, a reference is invited to the relevant passages in the chapter entitled "Native States", *vide* pages 426-429 of the 2nd volume of the Imperial Gazetteer of India—1909 edition—dealing with the Bombay Presidency.

4. **Administrative arrangements**—Prior to the creation of the entity now known as the Western India States Agency the Cutch and Palanpur Agencies each possessed a separate Political Agent, while Kathiawar was administered by an agent to the Governor of Bombay, under whom were four Political Agents, for the four Prants or divisions into which the agency was divided, *viz*—

- (i) Halar Prant (Headquarters, Rajkot)
- (ii) Sorath Prant (Headquarters, Jetalsar)
- (iii) Gohelwad Prant (Headquarters, Songadh)
- (iv) Jhalawad Prant (Headquarters, Wadhwan)

In 1923 these four Prants were reduced to two divisions, *viz* (i) the Western Kathiawar division comprising the former Halar and Sorath Prants, (ii) the Eastern Kathiawar division formed by uniting Gohelwad and Jhalawad. In 1924, when the political control of the Government of Bombay was transferred to the Government of India Cutch and the sixteen salute states formerly included in the old Kathiawar and Palanpur Agencies came into direct relations with the Agent to the Governor-General, and the remaining States and Estates were placed under the jurisdiction of the Political Agents in Western Kathiawar, Eastern Kathiawar and Banas Kantha with headquarters at Rajkot, Wadhwan and Palanpur respectively.

The civil stations of Rajkot and Wadhwan were placed under the administrative control of the Agent to the Governor-General. The non-jurisdictional estates have been grouped into Thanas, each under a Thandar.

5 States and Estates.—The Western India States Agency contains 20⁷ states and talukas of which 85 are jurisdictional and the rest non jurisdictional

The 17 Salute States in the Agency vary greatly in size from Cutch with an area of several thousand square miles to Jafraabad which is contained within 53 square miles. The estates also vary in size the smallest being less than one-thirtieth of a square mile in extent, with a population of less than 200

6 Units for census purposes.—In the Census of 1921 the states of Cutch Bhavanagar Gondal Nawanganar Junagadh and Palanpur only were treated as separate units, the remaining states and estates being merged in two other units as under —

(1) Rest of Kathiawar

(2) Rest of Palanpur Agency

On this occasion the total number of units for which figures have been compiled is 48 (for details, see Imperial Table I) This has entailed considerable difficulty as it necessitated ransacking scattered records for data hitherto not compiled in a compact form nor preserved in a single record room. While every care has been taken to insert correct comparative figures for previous decenniums complete data for 1891 1911 1901 1801 and 1881 are not forthcoming in the case of certain units and in consequence the tables contain a few gaps, and it is possible that further research may reveal isolated instances of inaccuracy even in the figures given. Further since it has not proved possible to procure the precise figures of population of some of the units for each previous decennium it has not been possible to furnish totals for the sub-agency groups such as the Eastern and Western Kathiawar Agencies and Banas Kantha (*vide* Imperial Table II)

The existence of these gaps is unfortunate the only consolation being that the decision to prepare and to print separate statistics for the Western India States Agency will ensure that adequate figures will be forthcoming for all units at least with effect from 1931

The method of selection of the units now included in the tables was elaborated in close consultation with and in conformance with the advice of Mr Kealy the Agent to the Governor-General for the Western India States Agency who as a former Provincial Superintendent has personal experience of Census work and the trials that befall the lot of a Provincial Superintendent.

7 Method of taking the Census.—The arrangement for the taking of the Census in state territory was as follows. Each state was supplied with the necessary forms and registers by the Provincial Superintendent in accordance with indents from the state, which individually undertook to adopt the system of enumeration laid down in the Imperial Census Code. As a consequence of this collaboration on the part of the various Durbars, the Census in the Western India States Agency has been taken in exactly the same way and by the application of methods identical with those which were employed in the Bombay Presidency and therefore there need be no hesitation in making comparisons between similar groups of figures in Part II of Census Volumes VIII and X, on the score that the figures have been collected on different systems and compiled on varying principles. I must however record that the quality of the work done in respect of enumeration has displayed varying degrees of excellence. In some states the general schedules were written up in a manner which was wholly satisfactory while in others, and these formed a larger percentage than was desirable, the entries in the enumeration books were often illegible and carelessly made, with the result that abstraction was hampered. Since a separate volume of statistics is now being printed for the benefit of the States, and the amount of Census data made available is much greater than formerly it is to be hoped that all Durbars will insist on adequate steps being

taken to ensure careful enumeration within their borders, as the value of the whole work depends entirely on the accuracy of the entries in the General Schedules

8 **Tabulation** — A somewhat unfortunate situation arose in connection with the arrangements for abstraction and compilation of the information collected during the process of enumeration. In view of the fact that the population of no less than 202 different states and estates was to be dealt with, it was the considered opinion both of myself and the Agent to the Governor General for the States of Western India that the most suitable method of handling the enumeration books of this vast number of units of varying sizes was to concentrate the schedules in a central abstraction office to be located in some central site preferably Rajkot. As the total population was just under four millions, the institution of such an office was a sound economic proposition since it would have been feasible to place the office under the supervision of a Deputy Superintendent with local knowledge of Kathiawar and to recruit a competent staff. Such an arrangement would not only have ensured absolute uniformity in dealing with the population of what is undoubtedly not only a political but also a geographical and natural unit but it would have facilitated the investigation of obscure points and the rectification of all glib or unintelligible entries in the enumeration books, since a reference to the source of origin of the books could easily have been made without undue delay. However at the outset almost all the larger states manifested a desire to set up abstraction offices within their state limits in order to deal with the respective state populations. Both Mr. Kealy and myself were averse to such a procedure. But in spite of our united protestations, a certain number of states persisted, and in the result the tabulation of the schedules was carried out as under —

- (a) In the cases of Bhavnagar, Nawannagar, Cutch, Gondal and Pulitana in state abstraction offices set up at the respective capitals of these states
- (b) In the cases of the remaining Salute States and the Eastern and Western Kathiawar Agencies, Banas Kantha and the Civil Stations of Rajkot and Wadhwan, at the Central Abstraction Office at Surat

As a consequence the tabulation of the material from the last mentioned areas was retarded by reason of the fact that the total population handled at Surat was increased, while in the case of the five states which set up their own offices, the numbers to be dealt with were so trifling that they were able to complete the various stages involved in tabulation much sooner than was possible in British offices which were dealing with millions of schedules apiece. As a result intervals of idleness were enforced upon these state offices and this must have caused unnecessary expense, while the supreme advantage of uniformity of method was denied to all.

9 **Cost of the Census** — A few details regarding the charges levied for the supply of the forms and registers and on account of the abstraction and compilation work done at Surat on behalf of the states which did not set up their own abstraction offices will perhaps not be out of place. All the durbars elected to obtain from British India the forms and registers they required for enumeration as well as tabulation, this uniformity of procedure enabled these to be supplied at the modest rate of Rs 1-14-6 per 1,000 of the population. As regards the cost of tabulation, this amounted to Rs 100 per 10,000 of the population calculated to the nearest rupee and the nearest 100. This scale meant that a large state like Junagadh with a population of over half a million was called upon to pay the sum of Rs 5,910-4-0 only. It would be interesting to compare this rate of expenditure with the costs incurred by the states that set up their own offices, but the figures are not available.

10 Acknowledgments.—A primary requisite for the successful conduct of census operations is whole-hearted and intelligent co-operation. It is with pleasure that I record that my relations with all the state census officers appointed by the various durbans to supervise operations within their respective boundaries have been uniformly pleasant. Any suggestion that I ventured to make received courteous and prompt consideration and I can only hope that their recollection of the period during which they and I worked together will be as agreeable as mine will always be.

I take this opportunity of conveying my thanks to Mr. Kealy for the valuable advice and considerable assistance he has given me and I think I ought to mention that gratitude is due to Mr. Kealy from others besides myself. If it had not been for his steady insistence, it is doubtful whether the decision to publish a separate report for the Western India States Agency would have materialised.

A. H. DRACUT

(Provincial Superintendent of Census Operations
in charge till May 26th 1932.)

Part I --Report

CHAPTER I DISTRIBUTION AND MOVEMENT OF THE POPULATION.

I AREA DEALT WITH

The area dealt with in this report is the Western India States Agency. It was formerly known as Kathiwar Cutch and the Palampur Agency. It consists geographically of three distinct portions, the large promontory or peninsula of Kathiwar, the semi-island of Cutch, and the area on the main land of Gujarat mostly comprised in what is now known as Palampur and the Banaskantha Agency. The boundaries of this composite Census unit are, on the north Sind and the Rajputana Agency, on the west and south the Arabian Sea and on the east the Mchikuntha Agency, British Gujarat and Baroda. In places the area is interlaced, as parts of British Gujarat are interlaced, with land of other territory and jurisdiction. Apart from Cutch which is in a sense a place apart, the whole area presents features of distinct unity and over most of it the Gujarati language is supreme. It is a portion of India where the rains usually come late and the rainfall varies from moderately good to scanty and deficient. There are therefore considerable contrasts in regards demography within the area now under consideration. Population density will be found usually to depend largely on the amount of timely rain that falls during the south west monsoon. Unfortunately rainfall and other climatic statistics for the Western India States Agency are very meagre and it is impossible in consequence to correlate in any satisfactory way the Census statistics with climatic records. Until this is possible the Census reports relating to the Western India States Agency must remain inferior to those relating to parts of India where adequate rainfall and other climatic statistics have been maintained.

2 STATISTICS OF POPULATION

The Imperial Tables that deal with the population as a whole are (1) Imperial Table I showing area, houses and population (2) Imperial Table II showing variations in population since 1881 and (3) Imperial Table XX showing summary figures of variation in population and density at various Censuses. A separate Provincial Table I was not prepared for the Western India States Agency. Taluka figures were not compiled for the States, nor was compilation of such figures possible owing to the very great diversity in size and area and jurisdiction of the many separate units comprising the whole for Census purposes. Only four of the seven prescribed Subsidiary Tables relevant to the present chapter could be prepared as information regarding the seasons and vital statistics could not be obtained. In most of the States such statistics are not compiled. It is therefore clear that the present Census Report in respect of the Agency, the first of its kind, must be deficient in several qualities that ought to be found in a Census Report. But the deficiency, though regrettable is inevitable. Subsidiary Table I shows the distribution of the population classified according to density in the four major units of the Agency, namely the seventeen salute states, the Eastern Kathiwar Agency, the Western Kathiwar Agency, and the Banas Kantha Agency. Subsidiary Table II shows variations in density of population in respect of each unit. This table has been prepared from Imperial Tables II and XX. Subsidiary Table III shows the average number of persons per house and the average number of persons per square mile. Subsidiary Table IV shows variations of population by states classified according to (a) actual figures and (b) proportional figures. The figures shown in the various tables refer to the population actually enumerated in the 1931 Census. It is here, however, necessary to mention that owing to an error in the Abstraction Office 21 persons belonging to the Wankaner State were inadvertently omitted from final enumeration. The mistake arose from the fact that these 21 persons were entered, not on consecutive pages of the enumeration book, but at the end of it after several blank pages and in slip-copying the mistake was not rectified. As a result, the population of the Wankaner State and the Agency as a whole is 21 more than that shown in the published Census tables, which have been allowed to stand as they are as the error in enumeration was discovered too late for the tables to be altered.

3 DIAGRAMS

The following diagrams have been prepared to present the statistical material used in the present chapter —

- (i) Proportional changes in population of the Western India States Agency 1881-1931
- (ii) Diagram comparing the density of population of the Western India States Agency with densities in other Provinces and States 1931
- (iii) Densities of the states in Western India States Agency 1931

PROPORTIONAL CHANGES IN POPULATION OF WESTERN INDIA STATES AGENCY
1881-1931

THE SCALE IN THE MARGIN SHOWS THE LOGS OF THE POPULATION IN TEN THOUSANDS

4 AREA AND POPULATION

The total area of the Agency is 35 442 square miles. It is divided into four major units namely (1) seventeen salute states with an area of 90,800 square miles (2) the Eastern Kathiawar Agency with an area of 2,784 square miles (3) the Western Kathiawar Agency with an area of 2,397 square miles and (4) Banas Kantha Agency with an area of 3 475 square miles. The area of the minor units composing these will be found in Imperial Tables I and XX. The area of the Agency as a whole is 92 per cent. of the area of the Central Division of the Bombay Presidency and 127 per cent. of the area of the Bombay States. It exceeds by a few square miles the area of Portugal. The population recorded at the last five Censuses and the proportionate increase on, or decrease from the previous ten years figures are shown in the statement (No. 1) below

STATEMENT No 1.

		Decennial.	1881 and 1931.
		Increase (+) Decrease (-) per cent.	
1881	3,432,461		+ 16.5
1891	3,966,345	+ 15.3	
1901	3,284,489	- 17.0	
1911	3,024,878	+ 7.3	
1921	3,541,610	+ 0.5	
1931	3,990,250	+ 12.9	

DIAGRAM COMPARING DENSITY OF THE BOMBAY PRESIDENCY WITH THOSE OF OTHER PROVINCES AND STATES 1931

If the 1881 population be taken as 100 the population at subsequent Censuses is 1891 115, 1901 95.6, 1911 102.6, 1921 103, 1931, 117. It will thus be seen that the 1931 population is practically the same as the population forty years ago in 1891. The Agency population was very adversely affected in 1901 by severe epidemics and recovery from them was slow in the next ten years, while in 1921 the influenza epidemic caused a further retardation of recovery. None the less, the Agency did show a slight increase in 1921 over the 1911 figures. The increase was no more than 0.5 per cent which compared somewhat unfavourably with an increase of 5.5 per cent in the districts of British Gujarat but favourably with the Bombay Presidency as a whole which showed a decrease of 1.5 per cent in population as a result of the influenza epidemic. At this Census the Agency has shared in the general increase of population and in almost the same ratio as Bombay Presidency. It may therefore be concluded that the ravages of plague in 1901 and the difficulties of recovery have been made good. The Agency as a whole is now where it was in 1891 in the matter of population. The precarious nature of much of its rainfall and the poverty of much of its soil, combined with the lack of that variety of conditions which characterises Bombay Presidency as a whole account for the differences in Census record over the last 50 years.

5 DENSITY

The density of population in the Agency in 1931 was 113 persons per square mile. If Rajkot and Wadhwan Civil Stations are excluded as purely urban areas, the density falls to 112 per square mile. This is low and compares unfavourably with density in adjoining areas and in Bombay Presidency as a whole as the following statement (No. 2) shows.

STATIST No. 2

Western India States Agency	113
Bombay Presidency	173
Boroda	299
Ahmedabad district	240
Broach district	227
Kaira district	458
Panch Mahals district	263
Surat district	120
Cambay	251

In the following cases density is lower than in the Western India States Agency, namely, Baluchistan 6 per square mile, states in Central Provinces, 80 per square mile, Jammu and Kashmir 45 per square mile. In the following cases the density is not very different from the density in the Western India States Agency, namely, North-West Frontier Province, 129 per square mile, Gwahior State 134 per square mile, and Assam 137 per square mile.

Of the seventeen salute states Rajkot has the highest density of population per square mile, namely 268 and Cutch has the lowest, namely 62. The salute states as a whole have a density of 117. The density of the Eastern Kathiawar Agency is 102. In it, Lathi with a density of 224 shows the highest figure and Patdi with a density of 66 the lowest. The density of the Western Kathiawar Agency is 159, and in the units composing it the densities range from 402 in the case of D. S. Vala Rawatram of Jetpur (Bilkho) to 64 in the case of D. S. Vala Mulu Surang of Jetpur (Prithadia). The comparative densities however possess little more than an arithmetical interest as the size of the unit and the number of large villages it contains are clearly the controlling influences. Thus the first of the two cases above has an area of only 40 square miles, while the second has an area more than three times as large. It is obvious, therefore, that unless the second possesses a proportionately large population congregated in large village units it will show a lower density per square mile. In the case of all the units in the Agency this caution to check the density against the area

and the number of villages is very necessary as the units vary enormously in size. For instance Cutch has an area of 8,250 square miles, while Jafrahad has an area of 53 latas of 4² and Wadhwan Civil Station of only 1 square mile. Comparative densities in such circumstances may have very little reality. The Agency as a whole is very thinly populated as compared with the conditions prevailing in most parts of India. The Banas Kantha Agency has a density of only 50 per square mile. Large parts of this Agency lie in a tract that is nearly rainless or has poor salty or sandy soil. The population in some portions of it is perpetually under the fear of scarcity and grain for cattle can become so valuable that it is stored as a form of wealth broken into only when necessity drives. Along the edges of the Run of Cutch conditions of this nature are common and many of the inhabitants are migratory to other more favoured places in search of work at certain seasons of the year.

6 VITAL STATISTICS.

As vital statistics similar to those prevailing in the adjoining parts of British India have not been maintained in the Agency there is no means of knowing the natural increase in population over the last decade or any previous decade. Until such statistics are maintained it will be impossible to compare the Census population with the natural population or to use the Census statistics relating to age, sex and civil condition for the purpose for which they are intended. It is to be hoped that before another Census occurs some improvement in this important branch of public information will have been made so that adequate comparison may be possible between the Agency, British Gujarat and the Baroda State.

7 VARIATIONS IN POPULATION BY UNITS.

The following statement shows the extent to which the major units in the Agency have contributed to the general increase of population during the last decade.

STATEMENT No. 3.

Unit.	Population, 1921.	Population, 1911.	Variation, per cent.
Western India States Agency	3,541,610	3,099,000	+ 14.0
Seventeen Malate States	2,752,713	3,131,198	+ 11.3
Eastern Kathia Agency	251,402	282,468	+ 1.4
Western Kathia Agency	313,600	381,731	+ 20.8
Banas Kantha Agency	206,872	203,553	- 1.6

The difference between the Banas Kantha Agency and the rest is clearly demonstrated. Individual units showing the percentage rise or fall in the population are arranged in the following statement.

STATEMENT No. 4.

Up to 6 per cent.		From 6 to 10 per cent.	From 11 to 15 per cent.	From 16 to 20 per cent.	20 per cent. and over
<i>Western India States.</i>					
Dungarpur	Cutch	Porbandar	Jamnudi	Morvi (22.7).	Osmia (23.5).
Rathenpur	Jafrahad	Palanpur (22.5).	Das nagar	Wankaner (26.7).	Rajkot (23.8).
	Palitana	Lambdi	Bhavanger		
		Wadhwa	Dhol.		

STATEMENT No. 1

Up to 5 per cent	From 6 to 10 per cent	From 11 to 15 per cent	From 16 to 20 per cent	20 per cent and over
	<i>Eastern Kathiawar Agency</i>			
Mul	Iskhtar	Lathi		Vala (23.5)
Patdi	Savli	Rajana		
	Choda	Wadhwan Civil Station		
		Rest of Eastern Kathiawar Agency		
	<i>Western Kathiawar Agency</i>			
Kodasargham	D. S. Vals	Mulu Jastan	Wadia	Manavadar (24.9)
	Suram of Jetpur (Pithadia)		Raylot Civil Station	Thanndevli (40.0)
	Rest of the Western Kathiawar Agency			Varpur (20.6)
				D. S. Vals Rawatram of Jetpur (Bilkho) (66.5)
				Khairatara (27.3)
	<i>Junagadh Agency</i>			
Tharad, Molek, Shin, Joravarkhan & State (Varahl)				

From the statement it will be seen that 7 units show an increase of population up to 5 per cent, 8 units an increase from 6 to 10 per cent, 9 units an increase from 11 to 15 per cent, 6 units show an increase of from 16 to 20 per cent and 10 units show an increase of over 20 per cent. Banas Kantha Agency as a whole shows a decrease of 1.6 per cent. Wao and the rest of Banas Kantha Agency show falls of 7.3 per cent and 2.5 per cent respectively. Vals in the Western Kathiawar Agency shows a fall of 1.2 per cent. In the absence of detailed information from the local authorities it is not possible to assign full reasons for these fluctuations. But it is probably not incorrect to conclude that where considerable increases have taken place the reason is the growth of some of the larger villages and where a fall has been registered the reason is unfavourable agricultural conditions caused by deficient rainfall and poor soil. Any one familiar with the Wao State and the petty jurisdictions which comprise parts of the Banas Kantha Agency will not be surprised at the low densities and the fall in population. Rather will he wonder that so many persons can find a livelihood in so little-favoured a terrain. The general increase of population which the whole of India has witnessed at this Census has however not left Kathiawar out of the reckoning and the population of the Agency as a whole has risen this time by 12.9 per cent.

8 HOUSES AND FAMILIES

The following definition of a house was issued at the house numbering stages of the pre-enumeration arrangement —

“ ‘House’ ordinarily means the building or part of a building inhabited by one family, that is, by a number of persons living together and eating together, in one common mess with their dependents and resident servants ”

“ At the last Census permission was given to modify this definition in large towns and to take as a ‘house’ every building separately assessed to municipal taxation. At the present Census it is proposed to collect certain additional economic information in large industrial centres (Bombay, Karachi, etc.) and for them

the general definition as above given was allowed to be modified. For ordinary small towns it is undesirable that the general definition be modified unless either (1) it is found too difficult for practical purposes, or (2) it is considered desirable to retain the definition adopted at the last Census for the sake of comparison of figures.

In Western India States Agency the general definition of a "house" was adopted throughout.

The reason for making a distinction between houses in urban and rural areas was to obtain statistics of overcrowding in towns. The statement given below shows for the last two Censuses the average number of persons per house in urban and rural areas in the Agency and in some of the larger States.

STATEMENT No. 5.

Area	Urban.		Rural.	
	1921	1931	1921	1931
Western India States Agency (total)	4.44	5.70	4.7	4.54
" " "	4.07	5.41	4.51	4.53
Baranagur	4.41	4.73	4.06	4.70
" " "	4.29	4.33	4.79	4.80
Narasapur	4.84	4.10	5.10	4.54
Jamnagar	4.41	4.00	5.03	4.73
Rest of the Western India States Agency	4.44	4.17	4.71	4.48

These figures would seem to show that in the Agency as a whole housing conditions have not improved—that is, that the number of houses has failed to keep pace with the increase of population thus raising the ratio of persons per house from 4.4 to 4.7. The corresponding figures for British Districts, Gujarat Districts and Baroda State are set out below—

	1921	1931
British Districts	5.1	5.0
Gujarat Districts	4.2	4.0
Baroda State	4.34	4.14

These figures suggest that in these areas, as in the Western India States Agency the provision of houses has failed to keep pace with the growth of population. Only in the Gujarat Districts of the Bombay Presidency have housing and population gone hand in hand. The number of persons living in a house is, of course, no guide in itself to overcrowding. To decide whether there is overcrowding with an average of 4.7 persons per house it is necessary to know how many rooms the average house in the Agency possesses. If a majority of houses "consists of one-roomed huts" there may be considerable overcrowding and insanitariness. The Census however has no information on the subject.

9 FAMILY STATISTICS.

An analysis of the population of the Agency to ascertain its family composition can be made on the lines of the statement which follows. Most of the information relating to sex, age and civil condition is however dealt with in succeeding chapters.

STATEMENT No 6

Category of population		Proportion per mille of population	Proportion per inhabitants of 1,000 houses
Children 0-10		294	1,373
Unmarried persons	10 to 15	93	431
Unmarried persons	15 and over	55	257
Married males	10 to 20	38	178
Married males	20 to 35	90	120
Married males	35 and over	99	163
Married females	10 to 15	21	98
Married females	15 to 35	111	673
Married females	35 and over	61	299
Widowed males	10 to 50	3	11
Widowed males	30 and over	27	126
Widowed females	10 to 40	18	81
Widowed females	40 and over	51	252
		1 000	4,671

If comparison is made between the number of married males over ten and married females over ten in each thousand houses, it will be found that there are 1,061 married males and 1,070 married females in each thousand houses. If however the married males aged between 10 and 20 and the married females aged between 10 and 15 are excluded from consideration, as being on the whole unlikely to form a family and rear children, the number of married males above 20 falls to 883 and the number of married females above 15 falls to 972 per thousand houses. It may be inferred from the above that on the whole monogamy is the rule. If now the number of children under ten (1,373) be added to the number of unmarried children from 10 to 15 (431) the total is 1,807. This number may be presumed to be the children of the 673 married females aged between 15 and 35. If to this number are added married males aged from 10 to 20 and married females aged from 10 to 15 the total shows that in the Agency married females of child-bearing age have on an average about 3 surviving children. This accords with the statistics recorded in the special Sex Table, where the ratio is 2.9 for surviving children.

Subsidiary Table I—Distribution of the population classified according to density

Agency	Under 150		150-300		300-450		*1050 and over		
	Area	Population (000's omitted)	Area	Population (000's omitted)	Area	Population (000's omitted)	Area	Population (000's omitted)

CHAPTER II--POPULATION OF CITIES, TOWNS AND VILLAGES

1 REFERENCE TO STATISTICS

Imperial Table I gives particulars of urban and rural population. Imperial Table III shows towns and villages classified by population. Imperial Table IV gives the list of towns classified by population with variations since 1881, and Imperial Table V shows the town population classified by religion.

At the end of the chapter there are four Subsidiary Tables which show —

- (1) The distribution of the population between towns and villages
- (2) The number per mille of each religion who live in towns
- (3) The towns classified by population
- (4) Miscellaneous information regarding principal towns

Diagrams

The following maps and diagrams have been prepared to present the statistical material used in the present chapter

- (i) Variation in urban and rural population since 1901
- (ii) Actual number of places of various sizes since 1881
- (iii) Variation in urban population living in places of various sizes since 1881
- (iv) The proportions of urban population by religion in certain states in the Western India States Agency

2 POPULATION BY TOWNS AND VILLAGES

There are 66 towns and 6,496 villages in the Agency. No town has been treated for Census purposes as a 'city'. There are only two towns with a population exceeding 50,000 persons, namely, Bhavnagar with 75,594 and Nawannagar with 55,056, and these fall into Class II for Census purposes. There are 10 towns in Class III with a population of between 20,000 and 50,000, and 18 towns in Class IV, with a population of between 10,000 and 20,000. In Class V there are 26 towns, with a population of between 5,000 and 10,000. In Class VI there are 10 towns. It is the comparatively large number of towns in Classes II, III and IV that give the Agency the high degree of urbanisation which it possesses. In the Banas Kantha Agency there is no place that has been treated as a "town" for Census purposes.

The following statement (No. 1) shows the number of towns and villages in the four major units of the Agency.

STATEMENT No. 1

Unit	Number of towns	Number of villages
Seventeen Salute States	51	4,809
Eastern Kathiawar Agency	7	569
Western Kathiawar Agency	8	559
Banas Kantha Agency	0	559
Total	66	6,496

The statement (No. 2) which follows gives the actual figures of the urban and rural population for the last four Censuses and the variations in the numbers of the urban and the rural population.

1 CHAPTER II POPULATION OF THE TOWN AND VILLAGES
 PART IV No. 2

Census	Total population		Variation		Total
	1	2	3	4	
1901	76,303	7,35,771	19,113	30,753	77,316
1911	132,977	8,32,003	31,133	1,38,111	866,111
1921	290,075	9,35,300	1,31,311	1,52,311	9,66,611
1931	661,377	9,115,111			

This statement shows that the urban population has risen during the decade by 21.9 per cent while the rural population has risen by only 9 per cent. The increase in total population has been 16.9 per cent and it will be obvious that in the Agency the rural population has been losing ground relatively to the urban. In the 1931 Census the urban population formed 11.1 per cent and the rural population 77.9 per cent of the total population.

The statement (No. 3) below shows the number of inhabited places of all sizes for the last five Censuses.

— ACTUAL NUMBER OF PLACES —
 — OF VARIOUS SIZES IN —
 — WESTERN INDIA STATES AGENCY —

STATEMENT No 3

Census	Number of places having population				
	Below 500	500- 2,000	2,000- 10,000	10,000 and over	
	1	2	3	5	
1931		4 163	1 896	174	29
1921		4 673	1 674	151	23
1911		1 522	1 718	153	23
1901		4 741	1,441	143	26
1891		1985	2,101	209	24

This statement presents features similar to the corresponding statement relating to the Bombay Presidency. It suggests that the village is more than holding its own as a populated unit. The relatively smaller rise in the rural than in the urban population is due to the rapid growth of a few of the larger urban units. In 1901, when the population of the Agency suffered a severe setback the number of villages was 1,741 and 1,111 in the below 500 and the under 2,000 category respectively as compared with 1,163 and 1,896 in these two categories in 1931. But whereas in 1891 there were only 143 places with a population between 2,000 and 10,000 and only 26 with a population of 10,000 and over, there were, in 1931, 174 and 29 in these two classes respectively. The number of places with a population between 500 and 2,000 has been rising steadily since 1901. It is the very smallest village unit in the under 500 class that shows signs of decline. The larger villages are steadily becoming more numerous. This feature has been observed in the Bombay Presidency very clearly. It suggests that the increase of population takes two main forms: first, it increases the size of the smaller village units while leaving the very smallest units unaffected; and second it tends to swell the middle-sized and larger town units. Between the two influences, which are simultaneous, it is difficult to say whether rural life is really losing ground to urban, though the rapid growth of a few large towns may give the appearance of the village population becoming relatively less important. On the whole the Census figures for the Agency, as for Bombay Presidency as a whole, do not support that view.

The following statement (No 4) will make the position clearer.

STATEMENT No 4

Census	Population of places classified as in the above statement			
	Below 500	500-2,000	2,000-10,000	10,000 and over
	1	2	3	4
1931	1,000,571	1,638,386	627,060	659,504
1921	1,001,850	1,425,622	558,580	490,720
1911	1,034,855	1,461,297	540,050	476,940
1901	994,680	1,279,179	517,200	528,397
1891	967,671	1,897,692	689,721	491,101

Note.—The population of encampments, boats and floating population has not been included in these figures.

This shows that the popular aggregations are in the villages with populations ranging from 500 to 2,000 and the towns with populations ranging from 2,000 to over 10,000. On the other hand the total population in the very smallest villages

Population in 1931 is recorded for the first time. The percentage increase in the population of the district since 1911 are as follows:

TABLE IV. 3.

Population	1911	1921	1931	% increase
Total	1,01,000	1,11,000	1,21,000	19.8
Urban	10,000	15,000	20,000	100.0
Rural	91,000	96,000	101,000	11.0

The increase in population is the highest percentage increase. This is partly explained by the fact that in the growth of a district like Kathiawar with an area of 16,000 sq. miles, with a population of 1,21,000 in 1931 and with an increase of 19.8%.

3. URBANISATION IN THE AGENCY

Statistics in 1931 of the population of the Agency are given in the following table. The population of the Agency in 1911 was 1,01,000. The population of the Agency in 1921 was 1,11,000. The population of the Agency in 1931 was 1,21,000.

TABLE IV. 4.

Population	1911	1921	1931	% increase
Total	1,01,000	1,11,000	1,21,000	19.8
Urban	10,000	15,000	20,000	100.0
Rural	91,000	96,000	101,000	11.0

This statement shows that the district town have increased in population. The small town have remained nearly stationary during the last twenty years. The small and town population has grown. It is evident that the towns of the two highest classes have manifested a great increase in population. The total urban population in 1931 was 20,000 out of a total population of 1,21,000 or 16.5 per cent. In the Bombay Presidency the urban population forms 20.9 of the total population. The Agency presents the extraordinary case of being more highly urbanised than Bombay Presidency which is itself the most highly urbanised portion of India. In the Bombay Presidency Census Report for 1931 the urbanisation of the Presidency has been compared with the urbanisation of the Western India States Agency. The reasons for the difference in the proportion of urban dwellers in British Districts of the Presidency and the Agency have been discussed at some length. It has been stated in the Report (Chapter II) as follows:—

"The reason appears to be the large number in the Agency of moderately sized towns which contain a very fair proportion of the population. There are also cases like Wadhwan Camp and Rajkot civil station where the total population of the unit is urban there being no rural population. To what extent historical conditions or economic circumstances contribute to the high urbanisation is not clear. It is possible that in the large entrepot trade in cotton and other agricultural produce that exists in Kathiawar with its good railway system conditions are favourable for the concentration of people in small towns at the expense of scattered hamlets. In fact urbanisation has progressed further in Bombay Presidency than in any other province in India but it is less in Bombay Presidency than in the Western India States Agency and in Baroda State where conditions are similar in part to those prevailing in Kathiawar and in part to those prevailing in British Gujarat."

VARIATION IN URBAN POPULATION LIVING
IN PLACES OF VARIOUS SIZES
 SINCE 1881
 WESTERN INDIA STATES AGENCY

SCALE $\frac{1}{10}$ IN 19000

The following statement compares urbanisation in the Western India States Agency with urbanisation in other provinces and larger states

Unit	Percentage of urban and rural population to the total population of the Province	
	Urban	Rural
Western India States Agency	22.1	77.9
Bombay	20.9	79.1
Assam	3.1	96.6
Madras	13.6	86.4
United Provinces	11.2	88.8
N. W. I. Province	8.2	91.8
Rajputana	13.9	86.1
Ajmer Merwara		
Central Provinces and Berar	9.8	90.2
Bihar and Orissa	1.0	96.0
Gwalior State	11.2	88.8
Mysore	15.9	81.1
Barda	21.1	78.6
Punjab	12.1	87.6
Bengal	7.3	92.7
Hyderabad (Deccan)	11.2	88.8

The following statement (No. 7) will carry the explanation further

STATEMENT No. 7

Unit	Number of towns	Population (urban)	Total population	Percentage of urban population to total population
1	2	3	4	5
Western India States Agency	66	883,776	7,909,240	22
Cutch	8	87,396	514,107	17
Junagadh	7	118,408	475,152	22
Nawanagar	5	85,133	409,102	21
Bhavnagar	11	152,609	500,274	31
Porbandar	1	73,783	115,673	29
Dhruvadkha	2	23,609	88,061	27
Palanpur	2	29,766	261,170	11
Radhanpur	1	11,225	70,570	16
Morvi	2	23,458	113,023	21
Gondal	5	77,207	205,846	38
Jafraabad	1	5,535	12,083	46
Wankaner	1	11,136	44,259	25
P. Itana	1	13,743	62,150	21
Dhrol	1	7,507	27,079	27
Limbdi	1	13,608	40,088	34
Rajkot	1	47,485	75,540	63
Wadhwan	1	18,269	42,002	43
Lakhtar	1	6,011	23,754	25
Sayla	1	5,230	15,285	34
Chuda	1	6,738	12,015	56
Vala	1	4,140	14,002	29
Lathi	1	6,090	9,404	65
Muli	1	5,389	17,109	31
Wadhwan Civil Station	1	13,344	13,344	100
Jasdan	1	6,007	34,053	18
Rajkot Civil Station	1	11,027	11,027	100
Rest of the Western Kathiawar Agency	6	60,027	225,408	27

1911	15	55
1921	12	52
1931	10	41

This statement shows that while the urban population has nearly doubled the increase in the rural population has not yet done so. In 1921 the rural population received a shock which it has not yet fully overcome. The urban population on the other hand did not receive in 1921 the setback which has since so affected the rural population.

C. THE POPULATION OF VILLAGES

The predominantly agricultural character of the population of the Agency is proved by the fact that out of every 1,000 persons not more than 75 live in the 4,463 villages with a population of less than 500 persons each. If the rural population be taken as a whole 120 per cent of it will be found living in villages with a population over 2,000 persons, 57 in villages with a population between 500 and 2,000 persons, and 243 in villages with a population of under 500 persons. The average population of a village, a purely arithmetical entity having no life in reality was 450 in 1931 as compared with 426 in 1921. The average population of a village does not help student in any way to understand the distribution of the rural population and the conclusion ought to be banished altogether from Census practice. The general arrangement of the urban and rural population of the Agency does not differ markedly from that prevailing in British Gujarat. Those who are interested in a fuller discussion of this question may be referred to Chapter II of the Bombay Provincial Census Report 1931 where the influences governing the size of towns and villages and the relative importance of these have received considerable attention.

The total number of immigrants from British Gujarat Districts and States in the 1911 Census was 25,011 or 49 per cent of the total number of immigrants from Bombay Presidency. In the 1931 Census information as to immigrants has not been compiled by district. But there is no reason to think that on this occasion there was any great change in the proportion of immigrants coming from British Gujarat. Nor would it be injudicious to believe that about half the immigrants from the Bombay Presidency at the Agency came in 1931 from Gujarat districts and States. A comparison of the number of immigrants from the Baroda State in 1931 with the 1911 figure supports this view. In 1911 the number of Baroda immigrants was 3,031 and in 1931 the number was 34,570. Of the immigrants from Bombay Presidency the males numbered 18,962 and the females 27,000. Of the Baroda immigrants the males numbered 11,970 and the females 22,600. The high proportion of female immigrants is very remarkable.

MAP OF WESTERN INDIA STATES AGENCY

Showing
Homeborn persons per mille of the total
population in some states
1931

1. DETAILS OF BIRTHPLACE

The 109,671 persons returned as having birthplaces outside the Agency were distributed in respect of birthplace as in the Statement below (No. 3)

STATEMENT No. 3

Province	Immigrants per mille of total immigrants	Actual number of immigrants
1	2	3
Ajmer-Merwara	4.7	510
Baluchistan	1.5	168
Bengal	5.0	618
Bombay British Districts	198.1	47,446
Burma	1.8	221
Central Provinces and Berar	6.0	657
Delhi	1.2	127
Madras	7.5	781

United Provinces	21.5	2,357
Other Provinces	1.2	170
Baroda	315.2	31,570
Bombay State	11.0	3,416
Central India Agency	8.8	905
Gwalior	1.2	136
Hyderabad	1.8	199
Legations	113.7	12,469
Other States	1.1	125
India Unspecified	17.8	1,711
French and Portuguese Settlements in India	0.1	92
Outside India	27.2	2,879
Aden	0.1	92

The extent to which Bombay British districts and Baroda predominate is very clearly demonstrated. The general explanation of this phenomenon has been given in section 2 above. It is unnecessary to labour the point further here. Rajputana is a good third in the matter of immigration and for precisely the same reason as prevails in the case of the two other main sources of immigration—46,862 persons or 427 per mille of all immigrants are provided by the Bombay Presidency and of these about half are from Gujarat, British districts and states—34,570 persons or 315.2 per mille of the total come from Baroda. Thus these two sources alone supply about 75 per cent of the immigrants. Rajputana, itself an adjacent territory to certain parts of the Agency, supplies 12,469 persons or 113.7 per mille of the total. No accurate information exists in respect of 3,416 persons or 31 per mille, who have returned birthplaces as born in India—2,879 persons or 27.2 per mille are returned as foreign born, that is, as born outside India. An explanation in respect of some of them has been given in section 2 above—9,180 persons, or 83 per mille, have been returned as born in other provinces and parts of India, such as Ajmer-Merwara, Baluchistan, Bengal, Burma, Central Provinces and Berar, Delhi, Madras, the Punjab, Central India Agency, Gwalior, Hyderabad, French and Portuguese Settlements and Aden. By far the most of these must consist of persons of the labouring class attracted by the cotton-growing and harvesting in Kathiawar.

The amount of immigration in the 1931 Census shows a decrease of 7.5 per cent as compared with 1921. It might have been expected that since the population of the Agency has risen by 12.9 per cent in the decade, immigration would also have shown a rise. The fact that it has not done so is doubtless the result of the general depression in business and trade, which has had precisely similar effects in the Bombay Presidency. The statement at the end of this

STATEMENT No. 6—*contd.*

District or State	Number per mille of the total emigrants	District or State	Number per mille of the total emigrants
Deccan Districts and States	8	Sind	130
Bombay	17	Hedkesh	61
		Katich	16
Thames	11	Nawalshah	19
United Provinces and District	•	Thar and Parkar	70
Madras	1	Other districts in Sind and Khairpur State	2

The emigrants to Bombay City and Ahmedabad are in most cases of the trading and commercial class. The emigrants to Sind are traders and labourers. Of the latter there is a constant stream of emigration into Lower Sind where a good deal of the routine clearing of canals and water courses in the cold weather is carried out by Gujarati speaking day labourers as any one familiar with conditions in Lower Sind will testify. Of the 78,429 emigrants to Baroda nearly 40,000 were enumerated in Baroda City whether they have been attracted by the opening of railway workshops and textile mills. The emigrants to Baroda otherwise and to Gujarat generally appear to fall into three main classes (1) marriage migrants and the children born of such a number which is indeterminate but is probably fairly constant (2) casual migrants of a temporary type like pilgrims, field labourers and the like (3) genuine emigrants who have gone for settlement outside the Agency. The emigrants from Rajputana are of similar types. 600 persons are returned as having emigrated to Ceylon (658) North Borneo (1) and Seychelles (1). These must all be traders.

6. BALANCE OF MIGRATION

The number of immigrants is returned at 109,674 and of emigrants at 291,322. The Agency thus appears to be a place that loses on balance. The difference in 1931 being 181,648. Subsidiary Table III at the end of this chapter shows in detail the migration between the Agency and the other parts of India. The loss to the Agency is perhaps not surprising. It is on the whole an arid tract and shows few signs of any great industrial development. Many of its inhabitants are engaged in trade which encourages emigration.

7. THE NATURAL POPULATION

The natural population of the Agency may be calculated as under:—

STATEMENT No. 7

1. Enumerated population	1,999,250
2. Minus number of immigrants	109,674
3. Plus emigrants	291,322
	—
	1,180,898
	— — — —

The sex composition of the population is as follows:—

STATEMENT No. 8

Proportion of males and females in 1,000 persons

	Males	Females
Actual population	507	493
Natural population	509	491
Immigrants	— 116	584
Emigrants	506	494

population in the three age categories. The Sundbarg formula as restated by Whipple is in accordance with the following plan (Statement No. 1) —

STATEMENT No 1

Age period	Progressive	Stationary	Regressive	Secessive	Acccessive
1	2	3	4	5	6
0-15	40	77	20	40	25
15-50	50	50	50	40	60
50 and over	10	17	70	20	15

An analysis of the population of the Agency on these lines yields the following result (Statement No. 2) —

STATEMENT No 2

Age period	Per cent		
	1931	1921	All India 1921
0-15	42	12	39
15-50	18	17	50
50 and over	10	11	11

The population of the Agency can be said to be progressive but there has been no improvement in the lowest age group ratio despite the general increase in population. The ratio, however, in that age group is higher in the Agency than in All India generally as revealed by the 1921 Census. In the statement below (No. 3), the age composition of the population of the Agency in 1931 has been compared with the age composition in England and Wales in 1921.

STATEMENT No 3

Age period	Western India States Agency		England and Wales 1921	
	Males	Females	Males	Females
1	2	3	4	5
All Ages	508	494	477	523
0-5	77	70	44	43
5-10	71	67	47	40
10-20	116	100	94	95
20-40	144	145	142	168
40-60	78	75	109	119
60 and over	20	22	41	52

This statement repeats the well-known difference between Indian and British conditions by which the number of persons in the lowest age-groups is definitely greater in India than in Britain, and the number of persons in the highest age-groups

	1	2	3
1	12	11	119
1-1	15	111	12
1-2	12	112	11
2	90	7	9
2-2	8	7	8
2-3	2		3
3-4	6	1	6
4-5	6		1
5-15	3	1	
15	1	11	16
	21	22	3
16	25	1	26
17	22	1	1
18	8	8	9
19-20	1	11	1

It would be well to say in the Agency the fact is that the three lowest age groups are higher than in Bombay Presidency and that in the age groups from 5 to 15 the rate is not so high as in the Agency. To what extent this result is due to immaturity is not known. Immaturity probably helps to explain the difference a little. A good deal is for the Agency but it is not possible to ascertain what extent the report for the Agency is due to it is not possible to know the number of persons in the group of 15. It is better to assume until further investigation is made that the low rate in the Agency is due to the fact that the mortality is lower than it is in Bombay Presidency and that in the Agency. There is however no available and reliable information on the subject and it will therefore be until the Agency reaches the standard of Bombay Presidency and that in the recording of births and deaths at various ages. Till that standard is reached the Agency returns for ages can be only partially useful.

The following statement (No. 5) shows the population by sex for all the age groups.

STATEMENT No. 5

Age group	Males		Females	
	1	2	3	4
0-1		490		502
1		149		511
2		181		519
3-4		190		510
4-5		501		499
0-5		459		508

DISTRIBUTION OF EVERY 1000 PERSONS BY AGE PERIODS BOMBAY PRESIDENCY AND BARODA STATE COMPARED WITH THE GENERAL POPULATION OF THE WESTERN INDIA STATES AGENCY 1931

(iii) statement (A) of the table is a number (d) percent persons are in (higher) category.

STATEMENT No. 6.

Age-group	Sexes by age per cent of total		Proportion per cent	
	Males	Females	Males	Females
1	2	3	4	5
1	43	42	1	2
1-2	1	0	2	0
2-3	0	0	2	1
3-4	0	0	2	2
4		0	1	1
4-5	100	110	11	19
5-10	706	700	16	16
10-15	215	15	19	11
15-20		15	5	1
20-25	166	16	9	3
25-30	161	16	1	1
30-35	130	13	1	3
35	11	12		4
40	54	57	5	5

50-55	0	6	6	1
55-60	0	11	1	3
60-65	0	6	2	2
65	11	17	1	1
70 and over	21	20	1	1
All ages not stated	1			
Total	1,206	1,273	100	100

This statement (No. 6) shows the relative distribution of the sexes by age-group. If the statement is compared with similar statements relating to the reports of the birth-differentials between the Agency and the parts in this respect will be clearly revealed.

" AGE DISTRIBUTION BY RELIGION

The statement below (No. 7) shows the mean age of males and females by religion. Mean age in itself is of very little interest. It represents a mere arithmetic calculation with no necessary relation to facts prevailing at various ages. For instance, the result of an increase of population which means more persons in the lowest age-groups is to depress the mean age of the population. This aspect of age statistics has been clearly shown by the Zoroastrian figures in the Bombay Presidency. The Zoroastrians as a community tend to have an unduly small number of persons in the lower age-groups and an unduly high number in the highest age-groups. It is not wise therefore to use the mean age statistics unless the various disturbing influences are borne in mind.

STATEMENT No. 7.

Religion	Males	Females
All Religions	23 35	23 55
Hindu	21 70	22 75
Muslim	21 65	23 25
Jain	23 75	21 75

AGE DISTRIBUTION OF 1000 OF EACH SEX BY RELIGION

HINDU

MUSLIM

The statement below (No. 8) is more useful

STATEMENT No. 8

Age distribution per 10,000 by religion

Age group	Hindu		Muslim		Jain.	
	Males	Females	Males	Females	Males	Females
1	2	3	4	5	6	7
0-5	1,612	1,633	1,612	1,612	1,497	1,371
5-10	1,412	1,761	1,433	1,325	1,360	1,238
10-15	1,331	1,200	1,330	1,203	1,260	1,154
15-20	983	940	938	953	906	892
20-30	2,801	2,022	2,831	3,018	2,060	2,057
30-40	1,574	1,491	1,501	1,505	1,776	1,800
40 and over	781	473	420	483	533	556
All ages combined	2	2	2	1	2	2

All three religions show a relatively higher proportion of females than males in the 20 to 40 years age group. The disparity is greatest in the case of the Jains. As the Jains are largely a trading community it seems likely that migration is partly responsible. It will be noted also that the proportions of the sexes in the lowest age group differ in all the three religions. In the case of Hindus the female proportion is higher than the male, in the case of Muslims the proportions are identical, in the case of Jains the female proportion is definitely lower. In the case of Hindus the female proportion falls below the male in the 5 to 10 age-group, which suggests that the mortality amongst girls is relatively great amongst Hindus. This is in accordance with what has been observed in Bombay Presidency at the 1931 Census. The explanation is probably similar to that found in the case of the Bombay Presidency. The Hindu community has a greater proportion of poor, backward and depressed class people in it. These people are continually living on the margin of existence. The Jains, by comparison, are well-to-do and the Muslims in the Agency, as in Bombay Presidency proper, tend to be artisans and petty traders living in towns, and if not very well-off, can hardly be described as living on the border-line of semi-starvation. Subsidiary Tables III and IV contain much useful information relating to the age distribution by sex in certain castes, and the proportions of children and persons of active ages and of married females in certain castes. It is not possible in a general Census Report to do more than direct the attention of specialised workers to the statistics therein set forth. It will be noted that the Vaghris, Bhangis and Chambhars have the highest ratio of children to persons aged from 14 to 43. These are sections of the Hindu community in which economic and social conditions are at their worst and the fact tends to confirm the view expressed above that it is the pressure of life upon those sections of the Hindu community least well fitted to bear it that accounts for the poorer survival qualities of children in the Hindu community than in the Muslim and Jain communities. In Subsidiary Table V-A it will be seen that in the Hindu community as a whole the proportion of children under 10 to persons aged from 15 to 40 is 77 while in the Muslim community the proportion is 75. Conversely the proportion of persons aged 60 and over to those aged from 15 to 40 is 11 in the Hindu community as against 12 in the Muslim community.

Figures are in lakhs

The statement has not a very serious and important revelation in respect of the number of persons who were engaged in 1931 and this is partly explained by the general increase in the population. The statement exhibits the distribution of the population of the Andamans based on the total effect of the place in 1931 and the number of persons. The population of persons engaged from 1911-1931 was 1,000 lakhs. The population of persons engaged from 1931-1932 was 1,000 lakhs. The population of persons engaged from 1932-1933 was 1,000 lakhs. The population of persons engaged from 1933-1934 was 1,000 lakhs. The population of persons engaged from 1934-1935 was 1,000 lakhs. It is observed that in 1931 the group suffered a great calamity.

Statement at Table I

Distribution of 10% of each of the Province

Number of persons engaged

Year	1931				1932				1933				Total

CHAPTER V—SEX

1 REFERENCE TO STATISTICS

In all the Imperial Tables and Provincial Table II the figures of the population have been shown by sexes. Imperial Table VII shows the population by sexes at different age periods while Imperial Table VIII gives similar information for selected castes. At the end of this chapter will be found four Subsidiary Tables setting out the proportions of the sexes in greater detail.

Diagrams

The following diagrams have been prepared to present the statistical material used in the present chapter —

- (i) Sex proportions compared with those in other Provinces and States
- (ii) Number of females per 1,000 males in the States of the Western India States Agency
- (iii) Number of females per 1,000 males at different age periods by religion

2 THE ACCURACY OF THE STATISTICS

The accuracy of the sex statistics has been discussed in the Bombay Presidency Census Report 1931. It is unnecessary here to do more than refer the interested reader to that report and to remark that as far as the Agency figures are concerned there is no reason to doubt the general accuracy, within certain limits of error, of the Census sex statistics. They do not provide quite so many puzzles to the enquirer as do the Bombay Presidency statistics. One reason why this should be so is that the Agency, in contrast with the Bombay Presidency, is a fairly definite unity showing homogeneity of character.

3 GENERAL PROPORTIONS OF THE SEXES

Of 3,999,250 persons enumerated in the Agency in the 1931 Census 2,025,751 were males and 1,973,496 were females. There was thus an excess of 52,258 males. The ratio of females to males was 971 females to 1,000 males. In the Bombay Presidency the corresponding female ratio was 909. The following statement (No. 1) shows the comparative number of females to 1,000 males for various areas in India and elsewhere.

STATEMENT No. 1

Province	Females per 1,000 males
England and Wales (1921)	1,087
Scotland (1921)	1,082
Bombay Presidency	909
Ajmer-Merwara	892
Assam	909
Baluchistan	778
Bengal	921
Bihar and Orissa	1,008
Burma	958
Central Provinces and Berar	1,000
Coorg	803
Delhi	722
Madras	1,025
North-West Frontier Province	843
Punjab	831
United Provinces	904
Baroda	942
Central India Agency	948
Gwalior	887
Hyderabad	959
Jammu and Kashmir	881
Mysore	955
Rajputana Agency	908
Western India States Agency	971

It will be noted from the above statement that the Agency shows a comparatively high female ratio. The fact has been explained and commented upon in the previous chapter. The Agency is inferior only to Madras, Bihar and Orissa, and the Central Provinces and Berar in respect of the comparative number of females to males.

The proportion of females to males in the Agency is shown in greater detail in the statement (N) below.

MMS

NUMBER OF FEMALES PER 1000 MALES AT DIFFERENT AGE PERIODS BY RELIGION -

-1931-

It will be noted that in the following cases the female ratio is higher than the male, Cutch (1,067), Jafrahid (1,019) Dhol (1,031) Kotda Sanghami (1,021), Lathi (1,017) and Chhda (1,008). In many other cases the ratio is over 950. The lowest ratios are in Wadhwan Civil Station and Rajkot Civil Station where there is a considerable immigrant population engaged in miscellaneous labour. The high female ratio prevailing in many parts of the Agency must be due partly to emigration of males for trading and immigration of females for marriage. But there seems no reason to doubt the existence of racial influences in certain local areas making for a high ratio of female births. This aspect of the matter needs study by social workers.

The comparative statement below (No. 3) will be found interesting. The sex proportions by religion are given for three Censuses and the corresponding figures for Bombay Presidency are shown.

STATEMENT No. 3

Religion	Western India States Agency		Bombay Presidency			
	1911	1921	1911	1921	1931	
	2	3	4	5	6	7
All Religions	974	972	961	969	912	929
Hindu	918	953	919	937	930	954
Muslim	1,029	1,015	1,025	899	817	846
Jain	1,169	1,160	1,063	817	821	830

These figures show a higher proportion of females in the Agency in all religions than in the Bombay Presidency. They show also a general tendency for the female ratio to rise, in marked contrast to Bombay Presidency, where only in the case of the Jains does the female ratio in 1931 show an improvement over the 1921 ratio and in that case the ratio in 1921 showed a decline from the 1911 figure. The exact explanation of this difference between the Agency and the Bombay Presidency is obscure. But in the Bombay Census Report, 1931, an attempt has been made to explain the continued fall in the female ratio. The great difference in the figures for Muslims in the Agency as contrasted with those in the Bombay Presidency is noteworthy. Muslims in the Agency are mostly town dwellers, artisans and petty traders, whereas in Bombay Presidency the chief contributors to the Muslim total are in Sind, where Muslims are pre-eminently agriculturists dwelling in villages and small hamlets. As the sex distribution by age groups has been described at some length in the previous chapter it is not necessary to dwell at length upon the matter here.

Subsidiary Table II shows the number of females per thousand males by age groups and religion for the last four Censuses.

The following summary shows the general result —

Religion	1901	1911	1921	1931
Hindu	950	949	953	958
Muslim	1,009	1,025	1,045	1,020

The diagram facing page 44 shows that the female ratio exceeds the male at ages under 5 and again at ages from 20 to 40 and at ages from 55 onwards. This is

markedly different from the Bombay Presidency Census results, where females are very much in a minority in the child bearing ages. It has been suggested above that some parts of the Agency must in this respect present features similar to those prevailing in the Ratnagiri district an area of emigration which takes the able-bodied males out of the district and leaves the female population behind. In the Bombay City figures the small number of females relatively to males, in the Jain community has been commented upon. Many of these Jains come from the Agency. It is therefore not unreasonable to suggest that a truer picture of the sex distribution of Jains over the age-groups could be obtained by combining the Agency with the Bombay City figures. The same is true of other communities emigrating from the Agency for purposes of trade and would apply to some sections of the Hindu community as well but not to nearly the same extent to the Muslim community.

4 SEX DISTRIBUTION IN SELECTED CASTES.

The main statistics will be found in Subsidiary Tables III and IV printed at the end of the preceding chapter and in Subsidiary Table IV printed at the end of this chapter. The following extract from Subsidiary Age Table III will prove interesting. The selection has been made to show an advanced Hindu caste (Audich Brahman) a backward Hindu caste (Dhed) an intermediate Hindu caste engaged mostly in agriculture (Kantia) a primitive Hindu caste (Vaghri) a Muslim caste (Shia Bohra) and a Jain caste (Swetambar).

STATEMENT NO. 4.

Age distribution (10000) of each sex.

Caste.	0-4		5-11		12-16		17-23		24-43		and over	
	Males	Females	Males	Females	Males	Females	Males	Females	Males	Females	Males	Females
					7		10		1		12	
<i>Hindu.</i>												
Audich Brahman	177	181	41	173	97		123	153	213	227	190	96
Dhed	190	223	280	193	91	66	130	115	249	300	136	100
Kantia	204	213	32	160	63	70	129	36	343	277	106	44
Vaghri	215	265	21	193	46	11	114	121	71	213	173	163
Shia Bohra (Muslim)	76	41	212	173	67	71	113	30	232	230	294	170
Jain (Swetambar)	130	61	36	104	97	20	102		230	213	204	211

This table suggests many interesting conclusions and lines of enquiry. Thus the Vaghris have the highest number of children, male and female under 6 years of age and have the poorest survival value over 44. The Audich Brahmans have the smallest number of boys under 6 and the Jains the smallest number of girls under 6. The survival value of the Audich Brahman for both sexes is poorer than that of Jains. But it is much greater than that of the intermediate backward and primitive Hindus. The Jains show a very small proportion of boys and girls in the age group 14 to 16 and the Shia Bohras only slightly less so. This must be due partly to children being sent away for education and to their being put to trade at an early age in the case of boys. The Audich Brahmans who do not engage in trade, do not show this phenomenon to anything like the same extent. In the age-group 17 to 23 years the Jains show a very small proportion for both males and females and this must be due to the young men being away and the young women being married elsewhere. In the age-group, 24 to 43 the Jain figures are not particularly distinctive from which it may perhaps be concluded that most of the emigrant Jains are quite young men and that the middle-aged men return to their native places, perhaps to be money-lenders and landlords. The proportions in the last two columns show with some accuracy the survival values of various types of living. The Vaghris are a bad last and then come the Dheds, who perform menial tasks and are much despised by the caste Hindus. Next come the Kantias engaged in the precarious task of cultivating a poor soil watered by a capricious rainfall. The Audich Brahmans following a sedentary and unadventurous occupation have about the same survival value as the trading Muslim Bohras. The well to do

Jains, who have lived in comfort for at least twenty years before they die, show the highest survival value of all. In the case of Jains the survival value of the females is greater than that of the males and the longevity of Jain widows has been frequently commented upon in previous Census Reports.

Subsidiary Table IV shows the number of females per 1,000 males in selected castes in 1931. This table demonstrates that in the case of the following castes in certain areas the female ratio is higher than the male, namely Darji (1,052), Dhobi (1,011), Kumbhar (1,009), Lohana (1,001), Soni (1,012), Bohra Shia (1,041) and Jain (Swetambar) (1,185). In the case of Lohanas, Bohras and Jains the emigration of males is probably partly responsible for the result. But it is doubtful whether in the case of castes like Darjis, Dhobis, Sonis and Kumbhars the same is true. In the absence of local information the reason for the high female ratio in these castes must remain obscure.

CHAPTER VI—CIVIL CONDITION

1 REFERENCE TO STATISTICS

The statistics discussed in the present chapter are contained in Imperial Tables VII and VIII already described in connection with age and sex. For the present purpose, these tables are employed to differentiate the population primarily into the three great categories of unmarried, married and widowed. At the end of this chapter will be found five Subsidiary Tables giving the following information —

- (1) Distribution by civil condition of 1,000 of each sex of each main religion and in each main age-period since 1881,
- (2) Distribution by civil condition of 1,000 of each sex at certain ages and each main religion,
- (3) Distribution by civil condition of 1,000 of each sex and religion,
- (4) Proportion of the sexes by civil condition at certain ages for main religions,
- (5) Distribution by civil condition of 1,000 of each sex at certain ages for selected castes.

The information was collected from column 6 of the general schedule. Instructions to the enumerators were to 'enter each person, where infant, child or grown-up, as either married, unmarried or widowed'. Divorced persons, who have not remarried, should be entered as widowed. 'Unmarried women living in prostitution or concubinage are to be entered as 'unmarried'. But persons who are recognised by custom as married are to be entered as such, even though they have not gone through the proper ceremony."

Diagrams

The following diagrams have been prepared to represent the statistical material used in the present chapter —

- (i) Distribution of one thousand of each sex in each religion by civil condition
- (ii) Proportion of married females under 10 (child marriage) and 10-15 (early marriage) to 1,000 total married females
- (iii) Widowed per mille of each sex by quinquennial age-periods in the Western India States Agency

2 GENERAL SUMMARY

Of a total population of 3,999,250 in the Agency 1,057,940 were returned at the 1931 Census as unmarried, 1,927,130 as married and 414,180 as widowed.

The following statement (No. 1) summarises the marital condition of every 1,000 persons at each of the last three Censuses.

STATEMENT No. 1

Civil condition.	1931		1921		1911	
	Males	Females	Males	Females	Males	Females
1	2	3	4	5	6	7
Unmarried	238	176	247	182	229	167
Married	238	244	220	230	245	256
Widowed	31	73	40	81	34	79
Total	507	493	507	493	508	492

This shows that in 1931 there has been a rise in the proportion of married persons and a fall in the proportion of unmarried persons and widowed persons since 1921, the fall being more pronounced in the case of widowed persons. The universality of marriage in India is well known and the figures for the unmarried at this Census emphasise this fact.

**DISTRIBUTION OF 1000 OF EACH SEX IN EACH RELIGION
BY CIVIL CONDITION
WESTERN INDIA STATES AGENCY**

P. S. D. Page 1332

The proportion of married males and females is highest in the Hindu community and lowest in the Jain community. The high proportion of Jain widows continues to be remarkable. In the statement (No 3) below conditions in the Agency are compared with conditions in various European countries in respect of the unmarried population.

STATEMENT No 3.

Country	Number of unmarried per mille.	
	Males.	Females.
Western India States Agency	470	387
Denmark	474	339
England	582	571
Italy	600	545
Sweden	571	630

WESTERN INDIA STATES AGENCY

It will be noted that the Agency figures for unmarried males are lower than the Bombay Presidency figures whereas the figures for unmarried females are higher than in Bombay Presidency. But both the Agency figures and the Bombay Presidency figures for unmarried are very much lower than the figures from the European countries cited. Thus while in the case of the latter countries more than half the male and female population is unmarried, in the Agency and Bombay Presidency more than six females out of every ten are married and something over five out of every ten males are married.

3 THE PREVALENCE OF MARRIAGE

Marriage is regarded as a necessary experience in the life of all Hindus. In the case of Muslims this view is not held in such thorough-going perfection. The marriage figures of the Agency are naturally coloured most by Hindu practice as the population is predominantly Hindu. Marriage is an event which in India normally occurs earlier in the life of a female than in the life of a male. If the female population up to the age of 15 years be taken it will be found that 158 out of every 1,000 are married, of females aged between 15 and 20 years only 121 per 1,000 remain unmarried, and of those aged from 20 to 40 only 15 per 1,000 remain spinsters. In the case of males the figures are not so striking but they are sufficiently arresting. Out of every 1,000 boys up to the age of 15 in the Agency 147 are married, out of every 1,000 young men aged between 15 and 20 only 475 are unmarried, and between the ages of 20 and 40 there are only 142 bachelors out of a thousand males.

4 CHILD MARRIAGE AND EARLY MARRIAGE

A "child marriage" is a marriage where either of the contracting parties is under the age of 10, and an "early marriage" is a marriage where either of the contracting parties is aged between 10 and 15 years. It is naturally usually the female who is most affected by child and early marriage. It is of course necessary to point out that neither child marriage nor early marriage is necessarily bad in itself. Many of the so called child and early marriages are merely betrothals. The important thing from the point of view of the welfare of the individual and the race is the age at which consummation takes place. There is, alas! not the slightest doubt that where child marriage and early marriage are much practised the age at which consummation takes place is very often too early and produces disastrous effects on the well-being of young mothers who thereby are made to bear children before their own bodies are properly ready for the exacting physiological task. In the statement below (No. 4) the amount of child marriage and early marriage in the Agency is shown for important units. It must be left to eugenists to trace in particular localities the effects of the practice revealed by the Census returns.

STATEMENT No. 4

Unit	Per mille number of females (child marriage).	Per mille number of females (early marriage)

Tharad	81	103
Nao	77	94
Mahli Nari Joravar Khan Mat (Taradi)	70	94
Head of the Western Kathiawar Agency	87	93

The localities in which child marriage is most prevalent in the Agency are Morvi, Dhrol, Bojana, Patdi and Manavadar in which more than one out of every ten marriages is of a child under the age of 10. Early marriage is prevalent most in Palampur, Morvi, Wankhar, Valsi, Bojana, Patdi, Manavadar, Thana Devli, D. S. Valsi Rawat Ram of Jetpur (Bilkho), Khamra and Tharad. An examination of the caste population of these places would reveal the sections of the population responsible for the high incidence of child and early marriage.

5 THE WIDOWED POPULATION

One of the unfortunate results of early and child marriage is to produce a widowed population of young persons. In cases where the remarriage of female widows is not permitted or encouraged unfortunate social results are caused. It is only in certain sections of Hindu society that this particular evil is serious. Amongst Muslims it does not exist, as there is no embargo on the remarriage of

6 CIVIL CONDITION BY RELIGION

Subsidiary Table II at the end of the present chapter shows Civil Condition by sex in each religion for seven age periods Some salient figures of that table are brought out by the following statement (No 7) for the three lowest age groups

STATEMENT No 7

Number per mille of the Married of each sex in each Religion

Religion	Males			Females		
	0—5	5—10	10—15	0—5	5—10	10—15
	2	3	4	5	6	7
All Religions	40	110	187	51	173	348
Hindu	44	127	214	60	203	388
Muslim	30	41	70	11	55	186
Jain	6	13	30	6	24	154

The earlier age of marriage amongst Hindus is very noticeable and as they form the bulk of the population the figures for the whole Agency are affected accordingly. It will be noted that Muslins do not marry very early. Nor do Jains but in the case of Jains there is a pretty general practice of marrying females by the age of 15. There is in this respect a great divergence between the figures for males and females in the 10 to 15 years group.

7 CIVIL CONDITION BY SELECTED CASTES.

The chief source of the statistics is Subsidiary Table V at the end of the present chapter. In the statement below (No. 8) the table has been summarised for Hindu castes.

STATEMENT NO. 8.

Distribution of 1,000 persons of each sex by Civil Condition.

Caste	Males			Females		
	Unmarried.	Married.	Widowed.	Unmarried.	Married.	Widowed.
1	2	3	4	5	6	7
Pashur's Audich	812	410	79	340	442	196
Musuvud	264	240	79	309	270	121
Bhangis	898	417	44	427	471	102
Chandelars	420	472	47	417	471	112
Durji	434	477	62	314	299	120
Dhod	402	444	64	414	440	114
Dhobi	311	429	80	402	446	154
Ghanchi	412	446	72	320	252	147
Hajam	439	475	87	302	277	120
Kumbhar	127	200	70	310	220	120
Kandi or Kandi	370	577	79	372	217	140
Lohana	211	419	40	340	442	172
Mali	214	427	46	302	439	118
Soei	217	421	82	336	402	122
Sutar	441	470	26	252	211	124
Vagheri	240	414	46	427	471	79

It will be noticed that the Kanbis have the smallest proportion of males unmarried and the Vaghers the highest proportion unmarried. As regards unmarried females the same two castes show the lowest and highest proportions. With respect to married males the Kanbis show the highest ratio and the Audich Brahmans the lowest. In respect of married females the highest ratio is returned by Kanbis and the lowest by Lohanas. In respect of widowers the highest ratio is that of the Audich Brahmans and the lowest that of Bhangis. The highest ratio for widows is that of the Audich Brahmans and the lowest is that of Vaghers. It is clear therefore that there are short-lived people and long-lived people and that the longer-lived people are those who do not have to work as the Vaghers have to work. As regards married condition there are all sorts of variations from the early marrying to the later marrying, and from the castes that leave a small proportion of their number unmarried to those that leave much larger proportions. The Census statistics in this chapter and particularly the Subsidiary Tables afford much material which social enquirers may profitably examine. It is not the function of a Census Report to do more than point the way through the mass of figures and suggest lines on which the statistics may be analysed in greater detail.

CHAPTER VII—INFIRMITIES.

1 REFERENCE TO STATISTICS

The instructions given to the enumerating staff were to record in the last column of the schedule whether any person was either insane, blind, deaf and dumb or a leper. Persons blind of one eye only were not to be included, nor was leucoderma to be confused with true leprosy. The statistics are tabulated in Imperial Table IX and in three Subsidiary Tables at the end of this chapter.

Diagrams

The following diagrams have been prepared to present the statistical material used in the present chapter —

(i) Number of cases of each infirmity per 100,000 persons at each age period

(ii) Proportion per 100,000 of the population suffering from each infirmity

2 ACCURACY OF CENSUS STATISTICS OF INFIRMITIES

Where such enquiries are made by amateurs the results obtained are not likely to be very accurate. In higher-class families, where the enumerator cannot have direct access to all the persons enumerated, concealment is an easy matter and is probably resorted to in cases of insanity or leprosy which are never readily admitted to be such. The extent to which the statistics of infirmities as a whole may be regarded as useful, despite their absolute inaccuracy, has been discussed fully in the Bombay Report 1931. It is likely that the leprosy statistics are much the most inaccurate of all, but even they may quite likely be within some measurable distance of the truth.

The leprosy returns in the Bombay Presidency vary in accuracy probably from within two-thirds to one-tenth of the truth, the accuracy depending more than anything on the incidence of the disease in particular areas. Where the disease is widely prevalent it is not properly reported. Where it is only occasionally found there is no doubt the Census statistics are nearer the truth. In the Ahmednagar district the medical authorities believe that the Census statistics of leprosy are about two-thirds correct. In Bombay City the statistics are believed not to be more than one-tenth correct. The Bombay Presidency as a whole is not an area where leprosy is as serious a scourge as it is in some other parts of India. This leads to the belief that the Bombay Presidency Census statistics of leprosy are on the whole not so inaccurate as they are popularly supposed to be. Their accuracy varies probably from between one-tenth to about two-thirds of the correct figures and generally the standard of accuracy may be held to be about midway between these ratios. The general evidence suggests that the Agency is not an area particularly affected by leprosy. But it is difficult to believe that the Census returns of leprosy from the Agency are nearer the more accurate end of the statistical scale. There has plainly been a good deal of faulty enumeration combined with concealment of the disease. It is probable that only in the case of blindness are the figures anything like accurate. Blindness is not a disease that carries any kind of social stigma with it. Sometimes rather the reverse is the case. Blindness is quite an asset to certain classes of beggars and others in unproductive occupations. It is also largely a disease of old age and old people are not usually averse to recounting their afflictions. The general accuracy of the Census statistics of infirmities has been fully discussed in the 1931 Census Report for Bombay Presidency and readers may be advised to consult that publication.

3 COMPARISON WITH OTHER CENSUSES GENERALLY

The following statement (No 1) shows the number of persons returned at the last three Censuses as suffering from the four infirmities with which the Census deals.

STATEMENT NO. 1

Number per 100 000 of Total Population

Year	Insane	Deaf Mute	Blind	Leprosy
1	2	3	4	5
1931	45	91	395	4
1921	36	60	291	11
1911	22	49	232	5

The great preponderance of blindness is noteworthy and so also is the low ratio returned for leprosy. In this respect the Agency figures should be compared with the Gujarat figures in the Bombay Presidency Census Report.

Subsidiary Table II at the end of this Chapter shows the incidence of the infirmities by age groups and sex for 1931. Subsidiary Table III shows the distribution of infirm by age per 10 000 of each sex. Subsidiary Table I shows the local incidence of each infirmity among the chief units in the Agency.

4. INSANITY

The number of persons returned as insane per 10 000 of the population has increased this Census from 36 to 45. Better enumeration probably accounts for the increase. It will be seen that the highest incidence is among males aged from 15 to 40 years, and among females in the 15 to 25 years age-group and again in the 25 to 45 years age-groups. This suggests that in the case of women there is some correlation between insanity and child bearing, the infirmity affecting women most at the early child-bearing period and again at the end of the child bearing period, at which later period another factor may come into operation, namely the disabilities connected with widowhood.

5. DEAF MUTISM.

The number of deaf mutes recorded per 10 000 of the population has risen this Census from 60 to 91. This disease shows a fairly constant incidence through all the age-groups for males and females, but finds its highest incidence for both sexes in the highest age-group. It would be interesting to know whether medical experience confirms or rejects the evidence of the Census figures in this respect.

6. BLINDNESS.

The number of blind persons recorded in 1931 per 10 000 of the population shows an increase since 1921 from 291 to 395. The increase is due probably to better enumeration. There are many areas in the Agency where conditions are unfavourable to the preservation of eyesight as the tract is arid and afflicted with great heat and with dust storms at certain times of the year. Eye disease through negligence is the greatest single cause of blindness and this while affecting children who are not properly looked after in infancy shows a distinct selection of the older age-groups. The Census figures show a progressive rise in blindness as old age is reached and are in this respect in complete accord with medical experience. It is to be noted too how blindness has a higher incidence after the age of 25 in females than in males. This also is intelligible. Women submit their eyesight to greater strain than do men. They are more shut up in smoky and ill-ventilated cook rooms and they do much needle-work of a kind that, unless properly guarded against, rapidly impairs the efficiency of the eyes. Blindness amongst children, where not congenital, may be ascribed almost entirely to neglect and preventible disease. The incidence of blindness is therefore much more likely to be heavier in the labouring and depressed classes than it is amongst those that are better-off and more cleanly in their habits. As the Agency contains a large number of persons in the former category blindness may be expected to be fairly common.

7. LEPROSY

General remarks on the accuracy of the leprosy statistics have been made in section 2 above. The recorded figures of leprosy in the 1931 Census are only 4 per

DIAGRAM SHOWING THE NUMBER OF EACH INFIRMITY PER 100,000 PERSONS AT EACH AGE PERIOD 1931 —

DIAGRAM SHOWING THE PROPORTIONS PER 100,000 OF POPULATION SUFFERING FROM EACH INFIRMITY 1881—1931—

MALES ——— FEMALES - - - - -

10 000 of the population, as compared with 11 in 1921. These figures are much too low and there is no means of knowing the extent of their inaccuracy. The figures in Subsidiary Table III show a capriciousness of incidence which cannot be readily explained except on the basis of faulty enumeration and wilful concealment of the disease. In this respect the leprosy returns show graphically no very consistent curve such as would be expected in connection with the incidence of any disease of non-epidemic form. In the circumstances detailed comment on incidence through the age-groups will serve no useful purpose. Locally, the returns suggest that leprosy is most prevalent in Bhavnagar, Radhanpur and Jafraabad. In the last of these the disease seems to be confined to women. It is obvious that only local enquiry by the medical authorities can clear up problems of local incidence. The Census is in no position to be able to do this.

CHAPTER VIII—OCCUPATION

1 STATISTICS.

The statistics relating to the occupations of the people are found in Imperial Table X. There are in addition two Imperial Tables XI A and XI B which deal with specific features of the occupational distribution. Imperial Table XI A shows the *traditional occupation of selected castes*. It shows also how far there has been a deviation from the traditional occupation. Imperial Table XI B shows the present distribution of workers amongst the same castes in various groups of occupation. The subsidiary tables are numbered I II III IV and V. Subsidiary Table I is divided into two parts numbered I (a) and I (b). I (a) shows the general distribution of occupations between earners (principal occupation) and working dependents. I (b) shows the general distribution of subsidiary earners. For the purpose of distinguishing the percentage recorded in urban and rural areas the two largest towns in Western India States Agency viz. Bhavnagar and Jamnagar have been taken to represent urban industrial areas and cities. In Bombay Presidency the seven prescribed cities for Census purposes, namely Bombay Karachi Poona Ahmedabad Surat, Sholapur and Hubli, have been taken to represent industrial areas and cities. No such "cities" have been prescribed for the Agency. Hence the two towns indicated above have been selected for present practical comparison only. Subsidiary Table II is also divided into two parts numbered II (a) and II (b). II (a) shows the distribution of earners (principal occupation) and working dependents by sub-classes in respect of each unit. II (b) shows a similar distribution of subsidiary earners. Subsidiary Table III shows the distribution of female occupations. Subsidiary Table IV shows comparative figures for 1921 and 1931 in respect of selected occupation. Subsidiary Table V deals with the occupation of selected castes (traditional occupations).

Diagrams.

The following diagrams have been prepared to present the statistical material used in the present chapter —

- (i) Proportion of working dependents to principal earners.
- (ii) Distribution of the working population by occupation.
- (iii) Proportion of female workers to male workers.

2 INSTRUCTIONS.

Four columns were provided in the enumeration schedules for entries relating to occupations —

Column 9—Worker or dependent.

Column 10—Principal occupation of actual workers whether principal earners or working dependents.

Column 11—Subsidiary occupation of actual workers.

Column 12—To show the particular industry in which any of the above workers was employed.

Column 0—*Earners or dependent.*— Only those women and children will be shown as earners who help to augment the family income by permanent and regular work for which a return is obtained in cash or kind. A woman who looks after her house and cooks the food is not an earner but a dependent. But a woman who habitually collects and sells firewood or cowdung is thereby adding to the family income and should be shown as an earner. A boy who sometimes looks after his father's cattle, is a dependent, but one who is a regular cowherd and earns pay as such in cash or in kind is an earner. Boys or girls at school are dependents.

Column 10—Principal occupation of Earners—“This column will be blank for dependents. Stress must be laid on the importance of avoiding vague words like “labour” or “service” or “shopkeeping.” The enumerator must enter the exact kind of labour or service and the nature of the goods sold. In the case of service it is necessary not merely to distinguish Government service, Indian State Service, Railway Service, Municipal Service, Village Service, Service in a shop or Office and Domestic Service etc. but also to show the exact occupation followed e.g. in the case of Government service whether Collector, or Army Officer or Civil Court clerk or Police Inspector, etc. In the case of clerks, the occupation of their employer must be shown, e.g. lawyer’s clerk. Persons living on agriculture must be distinguished as owners cultivating or non-cultivating, as cultivating tenants or as agricultural labourers. Gardeners or growers of special products must be shown in detail. Persons whose income is derived from agricultural land should be distinguished from those who derive it from land in towns or from the rent of houses. Coolies employed on earth-work should have the nature of the undertaking entered such as Railway Road, etc.”

Column 11—Subsidiary occupation of earners or occupation of dependents—Where an earner has two occupations enter here the one which is subsidiary to his or her principal occupation. Any kind of occupation followed by dependents should be entered.

Column 12—Industry in which employed (for organised employees only)—Since the Industrial Table was subsequently not compiled for reasons of economy, the detailed instructions for entries in this column are not repeated.

It will thus be seen that the whole population fell into one or other of the following classes—

- (1) Earners with one occupation
- (2) Earners with principal and subsidiary occupations
- (3) Working dependents
- (4) Non-working dependents

3 DIFFICULTIES IN CENSUS ENUMERATION AND COMPILATION

The main difficulty encountered concerned the definition of an “earner,” and it was not easy to preserve uniformity in this respect. At previous Censuses, it was the custom to classify the population as “workers” and “dependents” (non-working) and there was no such fine distinction as now exists between the terms “earner” and “working dependent.” Hence there has been confusion everywhere similar to that noticed in the Bombay Presidency and also as regards the proper classification of earners and working dependents.

The main sources of error are found to be in the difficulties of judgment, enumeration and classification experienced in the case of (a) principal and subsidiary occupations, including alternative work (b) principal earners and working dependents, (c) vagueness and inaccuracy in actual returns due to the lack of knowledge of what the facts really are, or to insufficient description of the occupation, so that classification at a later stage becomes difficult or impossible. As regards (a) the predominant occupation of agriculture affords the clearest examples of the difficulties since it is combined in many different ways with several occupations, some of which are comparatively easy to check, such as cattle-breeding or dairy-farming, and others of which are very difficult to check, like field labour, carting and fishing which may be carried on only occasionally and spasmodically. As regards (b) there is no royal road to clearness of definition since the distinction between a principal earner and a working dependent may range from the most obvious disparity to cases where it is merely a matter of opinion how an entry should be made.

For further and fuller remarks on the subject of the accuracy of the statistics the reader is referred to Chapter VIII of the Bombay Presidency Census Report 1931. The mistakes, inaccuracies, misunderstandings, etc. in enumeration, abstraction and classification are mostly the same in the Western India States Agency as in Bombay Presidency.

4 THE SCHEME OF CLASSIFICATION

All occupations are divided into four classes which are further sub-divided in twelve sub-classes 33 orders and 103 groups.

Class.	Description.	Sub-Class.	Description.
A	Production of Raw materials	I	Exploitation of animals and vegetation.
		II	Exploitation of minerals.
B	Preparation and supply of material substances.	III	Industry
		IV	Transport
		V	Trade
C	Public Administration and Liberal Arts.	VI	Public Force
		VII	Public Administration.
		VIII	Professions and Liberal Arts.
D	Miscellaneous	IX	Persons living on their income.
		X	Domestic service
		XI	Insufficiently described occupations.
		XII	Unproductive

There have been some changes in this classification since the last Census. These are explained in the Bombay Presidency Census Report 1931. The changes are of minor importance.

5 ERRORS IN THE RETURNS.

Sub-Class XI is specially intended for accommodating errors. Examples of vague terms returned in the enumeration books are —

service, Government service shop-keeper accountant, clerk labourer agriculture manufacturer salesman, a person changing his occupation daily for example one day cartman second day grass-seller third day field labourer. Such occupation is properly classed as general labour. Despite clear instructions on this point mistakes due to this kind of vagueness are of usual occurrence at every Census. The confusion caused by the terms *earner* and *working dependent* has been described in section 3 above. The occupational statistics as a whole may be regarded as reasonably accurate except as regards subsidiary occupations where they are plainly most unsatisfactory.

6 PROPORTIONS OF WORKERS AND NON WORKERS.

An important feature of the enquiry at this Census was that those who were non-workers and therefore entirely dependent upon others were not required to return the occupations of those upon whom they were dependent. There is therefore no material for assessing the total population supported by each particular occupation. Total figures for workers and non workers are available and also for certain classes of occupations. But this is not the same as having the figures available for all occupations. There can be little doubt that by this deficiency the present Census is inferior to the 1921 Census of occupation.

In the marginal statement (No 1) the proportions of workers and non-workers,

STATEMENT No 1

Category	Number per mille of the total population		
	1921	1931	1931
Workers and Working Dependents	376	386	433
Non Working Dependents	623	614	567

so far as changes in Census classification make comparison possible, are compared for the Agency for the last three Censuses. These figures tend to show that the number of non workers has increased relatively to workers. The general increase in population

partially explains this result. In the Agency there are roughly 4 workers to

6 "non-workers" The meaning of worker and non-worker for Census purposes must of course be borne in mind. Females engaged merely in housework and the rearing of families are in the eyes of the Census non-working dependents, though they are doing work of the utmost social and economic significance. The Census statistics as a whole therefore fail to do justice to "employment," as contrasted with "occupation" and give no adequate account of the employment of the female population.

The following statement (No. 2) shows the proportion of workers (principal earners and working dependents) and non-workers (non-working dependents) in the Agency according to the 1931 Census after making allowance for the exclusion of the two largest towns, namely Bhavnagar and Jamnagar, where occupational distribution may be reasonably held to have an urban rather than a general character.

STATEMENT No. 2

Category	Western India States Agency excluding Bhavnagar and Jamnagar	Bhavnagar and Jamnagar
Earners and working dependents	390	329
Non working dependents	610	671

The result as it happens is somewhat surprising. It is rather different from what might have been expected. The proportion of non-working dependents is actually higher in the two towns than in the Agency apart from them. From this it may be concluded that the population of the two towns is not of the industrial type like that found in Bombay City and Sholapur, but of the town residential type, similar to that found in Poona City Municipality.

If attention be turned now to the figures of working dependents for the Agency as a whole it will be seen that the ratio of 124.8 working dependents per mille of the population is made up of 19.4 males and 75.4 females. In other words 15.3 per cent of the female population is helping to augment the family income by some form or other of economic activity. If females aged under 10 and over 50 are excluded it will be seen that 45 per cent of all females of more or less able-bodied ages are doing some kind of economic work. This is a high percentage. A conclusion may be drawn from it that the economic condition of the majority of the population is low, else it would not be necessary for so many females to find economic occupation. The conclusion is perhaps not surprising. For the fertility of the soil in the Agency is not high, nor is the rainfall particularly favourable. As the bulk of the population is engaged in agriculture of one kind or another the standard of living provided by agriculture cannot be high and indeed in parts of the Banas Kantha Agency it is very low and it is necessary to mobilise the services of women to a greater extent than is needed in more favoured areas. The population of the Agency consists of a large and not well-off agricultural class and a much smaller but well-to-do trading class, so that wealth may be said to be rather badly distributed in consequence and the majority of the female workers are of necessity drawn from the poorer sections of the population. In this respect the Agency probably presents features very similar to those prevailing in parts of the Ahmedabad district in British Gujarat, with which in parts it may fairly be compared.

The statement below (No. 3) shows the ratio per mille of working dependents to the total population and the percentage of female working dependents to the total female population and gives the comparative ratios for Bombay Presidency and Gujarat.

STATEMENT NO. 3.

Item.	Bombay Presidency	Gujarat.	Western India States Agency
	3		4
Ratio per mille of working dependents to the total population	82.8 (Males 53.4) (Females 117.7)	114 (Males 67) (Females 96)	124 (Males 4) (Females 1)
Percentage of female working dependents to the female population	7	1.8	1.4
Percentage of female working dependents to the total population	67.2	64	64
Percentage of female working dependents to able-bodied females	24.1	28.8	3

—PROPORTION OF WORKING DEPENDENTS TO EARNERS—

— IN —

—W. I. STATES AGENCY—

I P O Form 233

It will be seen that there is some correspondence between the Gujarat figures and the Agency figures. The Gujarat figures of course include Kaira, Broach and Surat districts, where conditions are not at all similar as these districts contain large areas of fertile and thickly populated agricultural land, though they do at the same time have large populations of depressed and primitive classes, which lowers the average of the standard of living considerably. It will be seen that the percentage of female working dependents to the total female population is very much lower in the Bombay Presidency than in the Agency. The most striking feature however of the statement is the way in which it brings out the very high percentage of female working dependents to able-bodied females in the Agency. The ratio in the Agency is as high as 45 per mille as compared with 28 in Gujarat and only 24.1 in Bombay Presidency. This seems to confirm the view expressed above of the lower standard of living prevailing in the Agency.

7 PROPORTIONS OF EARNERS AND WORKING DEPENDENTS IN
EACH CLASS

The following statement (No 4) shows the proportion per mille of working dependents to principal earners in the four occupational classes explained in section 4 above

STATEMENT No 4

Class	Proportion
A	645
B	247
C	100
D	483

From this it will be seen that the highest proportion is in Class A which includes the exploitation of animals and vegetation, of which agriculture is the most important component. In Class B which includes industry and trade, the proportion is very much lower. But whereas there are 595 out of every 1,000 occupied persons engaged in the exploitation of animals and vegetation, there are only 210 out of every thousand engaged in industry and trade. It is therefore quite obvious where the occupational foundation of the Agency rests.

8 PROPORTION OF WORKERS (PRINCIPAL EARNERS AND WORKING
DEPENDENTS) IN EACH CLASS

The next point of interest is the occupational distribution of principal earners and working dependents. The statement (No 5) below shows this distribution.

STATEMENT No 5

Sub-class		1931	1921
I	Exploitation of Animals and Vegetation	595	584
	<i>Agriculture only</i>	544	530
II	Minerals	4	3
III	Industry	134	141
IV	Transport	25	25
V	Trade	76	76
VI	Public Force	12	12
VII	Public Administration	20	21
VIII	Professions and Liberal Arts	26	29
IX	Persons living on their income	3	3
X	Domestic service	16	13
XI	Insufficiently described occupations	72	67
XII	Unproductive	19	26

From this it will be seen that out of every 1,000 workers, 544 are engaged in agriculture, 134 in industry, 76 in trade and 72 in insufficiently described occupations which are actually mostly general labour. No other sub-class employs more than 26 persons per mille, which is the amount of occupation afforded by the professions and liberal arts, a category to which the most numerous contributors are persons connected with religion and enumerated under the heading "monks, nuns and religious mendicants". Out of every ten workers in the Agency, therefore, between five and six are agriculturists and between three and four are engaged in industry and trade. All other kinds of occupation together employ less than three workers out of every ten.

In the following statement (No 6) the occupational distribution of workers (as above explained) in the Agency in 1931 is compared with the Bombay Presidency and the Gujarat distribution.

CHAPTER VIII—OCCUPATION

STATEMENT No 6.

	Western India States Agency	Bombay Presidency	Gojard.
Agriculture etc.	66	66	70
Industry	11	11	12
Transport			
Trade			
Public work			
Public Administration			
Professions and Liberal Arts			
Persons living on their income			
Unemployed			
Industrially described occupations			
Unemployed			

From this it will be observed that Agriculture is relatively less important in the Agency than in the Bombay Presidency and Gujarat and that Industry and Trade are relatively more important. The Census figures are in consonance with the known conditions. The agricultural superiority of Gujarat is very clearly revealed.

—DIAGRAM SHOWING THE GENERAL DISTRIBUTION—
 —OF THE WORKING POPULATION BY OCCUPATION—
 —IN—
 —WESTERN INDIA STATES AGENCY—

P. 2. D. Press (1911)

In the Agency 388 out of every thousand persons are workers." The

STATEMENT No 7

Class	Earners.	Working dependents.
A—Production of raw materials	141	61
B—Preparation and supply of material substances	73	18
C—Public administration and liberal arts	30	3
D—Miscellaneous	30	14

distribution of the 388 persons among the various classes of occupation is shown in the marginal statement (No 7). This statement again brings out clearly the extent to which working dependents are engaged in agricultural operations.

If agriculture be excluded there are 34 working dependents to 122 principal earners in 'all other occupations'. The statement (No 8) which follows shows the distribution of the ratio per mille of the total population of earners and working dependents in the four occupational classes in Bombay Presidency and Gujarat.

STATEMENT NO 8

Class.	Bombay Presidency		Gujarat	
	Earners	Working dependents.	Earners	Working dependents
	2	3	4	5
A	210	47	177	126
B	60	6	68	10
C	14	1	12	1
D	11	8	28	11
	192		131	
	Excluding A there are 15 working dependents to 111 earners		Excluding A there are 22 working dependents to 108 earners	

Comparing these figures with the Agency figures shows that, if agriculture be excluded, there are in Bombay Presidency 15 working dependents to 111 principal earners, and in Gujarat 22 working dependents to 108 principal earners, while in the Agency there are 34 working dependents to 122 principal earners. It would not be safe to conclude from the high percentage of working dependents to principal earners in Class A in Gujarat that the standard of living there is definitely lower than in the Agency. There are, on the contrary, good reasons for believing that the returns to agriculture in Gujarat are much better and the high percentage of working dependents there means little more than that agriculture is the family occupation of a settled population in which men, women and children take part. In this respect Sind, a predominantly agricultural country, affords a complete contrast. There, the women do not work in the fields at all and the agriculturist lives without resorting to their help. Actually it is unsafe to generalise from agricultural occupational practice to the standard of living unless the character of the reward for agricultural exertion is considered. In the case of the Agency there is no doubt that agriculture is more precarious than in most parts of Gujarat and Sind, and that is the reason why it was suggested above that the number of persons supported by agricultural operations in the Agency is probably a sign of a lower standard of living. The question is, however, one that requires an analytical examination of local conditions. Reasonable explanations of the Census statistics are here offered for what they may be worth as a basis for further special local enquiry.

9 OCCUPATION IN LARGE TOWNS AND THE REST OF THE AGENCY COMPARED

The following statement (No 9) has been prepared in order to enable the effect of the two large towns on the general occupational distribution of the Agency to be studied separately.

STATEMENT No. 9

Earners and working dependents per mille of the total population in the two towns and the rest of the Western India States Agency

Sub-class.	Bhavnagar and Jamnagar	Rest of the Western India States Agency
1	2	3
I	69	610
II	2	4
III	250	130
IV	1.1	22
V	224	72
VI	62	10
VII	76	18
VIII	63	25
IX	13	2
X	29	16
XI	74	72
XII	16	19

This statement should be studied along with statement No. 5 above. The effect of isolating Bhavnagar and Jamnagar from the rest of the Agency has been to raise the Agency ratio of "workers" in Sub-class I from 581 to 610 and to reduce the Agency ratio for "workers" in Sub-classes III and V from 134 and 76 to 130 and 72 respectively. As regards the two towns, the marked difference in the ratios for Sub-classes III and V between the towns and the rest of the Agency is very noteworthy. The two towns show a ratio for industry of 250 as compared with 130 outside them and for trade a ratio of 224 as compared with 72 outside them. From this some idea may be gained of the importance of these two places in the industrial and commercial life of the Agency as a whole.

10 DETAILS OF OCCUPATIONAL SUB-CLASSES.

The term *sub-class* when applied to occupations though generally descriptive deserves examination in greater detail. As regards Sub-class I Exploitation of Animals and Vegetation, the statement (No. 10) below will prove interesting.

STATEMENT No. 10

Workers of all kinds in major groups.

<i>Sub-Class I</i> Exploitation of Animals and Vegetation	937,564
<i>Group N</i> 1.—Non-cultivating proprietors taking rent in money or kind	36,501
<i>Group No.</i> 2.—Estate agents and managers or owners	1,413
<i>Group N</i> 5.—Cultivating owners	99,058
<i>Group No.</i> 6.—Tenant cultivators	234,613
<i>Group No.</i> 7.—Agricultural labourers	389,042
<i>Group No.</i> 16.—Market gardeners, flower and fruit growers	8,871
<i>Group N</i> 18.—Wood-cutters and charcoal burners	7,232
<i>Group No.</i> 21.—Cattle and buffalo breeders and keepers	37,276
<i>Group No.</i> 23.—Herdsmen, shepherds and breeders of other animals	31,671
<i>Group No.</i> 27.—Fishing and pearling	2,164

Of the 937,564 persons engaged in this sub-class, 36,501 are non-cultivating proprietors 99,058 are cultivators 234,613 are tenant cultivators and 389,042 are agricultural labourers and helpers. Of the last 275,614 are working dependents, male and female, who are assisting the heads of families be these owners tenants, or mere labourers. In the statement (No. 11) below conditions in this respect are compared with those prevailing in the Bombay Presidency and Gujarat.

STATEMENT No. 11

Workers of all kinds per mille of total workers

Occupation	Western India States Agency	Bombay Presidency	Gujarat
Non-cultivating proprietors	23	23	18
Cultivating owners	63	112	215
Tenant cultivators	205	151	31
Agricultural labourers	216	315	359

From this statement some interesting conclusions may be drawn. One is the high ratio of tenant cultivators in the Agency, nearly seven times that in Gujarat. Another is the low ratio of cultivating owners in the Agency. It is about half the ratio in the Bombay Presidency and about one fourth of the ratio in Gujarat. Thus, with the high ratio for tenant cultivators, suggests that there is in the Agency a greater number of middlemen between the owner and the actual cultivator than is the case in either the Bombay Presidency or Gujarat. The intervention of middlemen in this manner is regarded usually as a bad system. It is noteworthy, too, in this connection that the ratio of non-cultivating proprietors is higher in the Agency than in Gujarat, though the Bombay Presidency figures are the same as in the Agency. It is likely, however, that the Bombay Presidency figures are affected unduly by the conditions prevailing in parts of Sind. The low ratio for agricultural labourers in the Agency suggests that the land is not so fertile as in Bombay Presidency and Gujarat. But there are other explanations that may account for the low ratio, though actual shortage of field labourers is not likely to be one of them.

As regards Sub-class III, Industry, the statement below (No. 12) accounts for the 211,795 persons employed.

STATEMENT No. 12

Order No.	Description	Workers of all kinds (absolute figures)
1	2	3
5	Textiles	49,894
6	Hides, skins, etc.	16,552
7	Wood	21,636
8	Metals	13,815
9	Ceramics	21,749
10	Chemical products, etc.	5,795
11	Food	10,041
12	Dress and the toilet	36,601
14	Building, etc.	15,282
17	Miscellaneous and undefined	19,169

Textiles are the largest single item contributing to the total. Of the 49,894 persons employed on textile manufacture, cotton spinning, sizing and weaving employ 28,076 persons, 18,998 males and 9,078 females. The Census unfortunately has no information of the extent to which textile manufacture is an organised factory industry or is a cottage industry. It is probable, however, that most of the workers are cottage workers and not factory workers, as the Agency produces cotton cloth of various distinctive local patterns of a kind not usually associated with machine-made goods. An examination of the other main items contributing to the total of industrial workers reveals the fact that industry is not organised but consists mostly of artisans, craftsmen and home workers, as in most parts of the Bombay Presidency outside Bombay City, Ahmedabad and Sholapur, which are

essentially factory towns. Thus the workers in ceramics are nearly all potters and makers of earthenware the makers of chemical products are nearly all engaged in refining vegetable oils the persons employed in industries of dress and the toilet are mostly dargis, dressmakers, washers cleaners and barbers the persons employed in the building industries are mostly stone-cutters bricklayers, masons and the like. The workers in metals are mostly blacksmiths and makers of implements the persons engaged in food industries are mostly rice-pounders and huskers butchers sweetmeat and condiment makers and tobacco manufacturers (probably bidi makers). These occupations are typical of the industrial distribution. Under miscellaneous industries there is the making of jewellery and ornaments, which employs nearly half of the total shown in that order of industry. Nearly all these workers are cottage and individual workers having no connection with factories at all. Thus industry in the Agency though relatively important is not organised industry and has little relation to industrialism as that term is generally understood in works on economics. Comparing the 1931 figures with the 1921 figures the ratio of persons engaged in industry has fallen from 141 per mille to 134. For this the business and trade depression is responsible. The Bombay Presidency shows exactly the same state of affairs.

Transport (Sub-class IV) employs 38,532 workers of all kinds. The chief of the items that contribute to this total are

(i) Transport by water	9,307
(ii) Transport by road	17,607
(iii) Transport by rail	9,520
(iv) Post Office telegraph and telephone services	1,912

No workers have been recorded under the head Transport by Air

As regards Sub-class V Trade the distribution of persons engaged in trade in the Agency is shown by the statement below (No. 13). Trade employs 122,303 persons in all

STATEMENT No. 13.

Order No.	Description.	Workers of all kinds.
1	2	3
23	Banks, establishments of credit, etc.	10,740
24	Brokerage, commission agents, et	1,801
25	Trade in textiles	17,028
26	Trade in skins, leather, etc.	1,064
27	Trade in wood	1,477
31	Hotels, cafés, restaurants, etc.	4,650
32	Other trade in food-stuffs	43,978
36	Trade in means of transport	3,569
37	Trade in fuel	4,450
38	Trade in articles of luxury	1,632
39	Trade, other sorts	30,518

Trade usually goes hand in hand with industry except in centres that exist merely as entrepôts for the clearing and forwarding of goods as is the case with Karachi. The Agency shows the normal relation of trade to industry except in one particular the large number of workers engaged in banking, brokerage and credit dealings. This is due to the important part played in the trade of Cutch and Kathiawar by a very enterprising section of the population engaged in this kind of work. Their presence and importance have been noted in the Bombay Census Report 1931 and their influence extends far beyond the immediate confines of the the Agency itself. Of traders in food-stuffs the most important numerically are dealers in grains and pulses, sweetmeats, sugar and spices, dairy products, other food-stuffs and tobacco. Traders, other sorts are mostly general storekeepers and shopkeepers otherwise unspecified. There is nothing particularly distinctive

in the distribution of the persons employed in trade. The general features of it are similar to those prevailing in other parts of India.

The short statements (Nos 14 to 20) which follow, explain the distribution of the employed population in the other main occupational groups. Comment is unnecessary. Imperial Table X gives full details.

STATEMENT No 14

Statement showing the population of workers in the chief items of the Public Force (18,317)

Item	Description	Workers of all kinds
Group 151	Army (Indian States)	1,802
Order 43	Police	16,429

STATEMENT No 15

Statement showing the population of workers in important items of Public Administration (31,195)

Group No	Description	Workers of all kinds
159	Service of the State	13,599
160	Service of Indian and Foreign States	13,664

STATEMENT No 16

Statement showing the population of workers in important items of the Professions and Liberal Arts (41,857)

Order No	Description	Workers of all kinds
45	Religion	24,203
46	Law	1,547
47	Medicine	3,165
48	Instruction	7,666
49	Letters, Arts and Sciences (other than Public Administration)	5,276

STATEMENT No 17

Statement showing the population of workers in Sub Class IX

Number of Sub Class or Group	Description	Workers of all kinds
Sub Class IX	Persons living on their income	4,297
Group 154	Proprietors (other than of agricultural land), fund and scholarship holders, and pensioners	4,297

STATEMENT No. 18

Statement showing the population of workers in important items of Domestic Service (No. 113)

Group No.	Description	Workers of all kinds
186	Private motor drivers and cleaners	1,451
167	Other domestic service	23,972

STATEMENT No. 19

Statement showing the population of workers in the chief items of Sub-Class XI—Insufficiently Described Occupations (111,627).

Group No.	Description	Workers of all kinds
188	Manufacturers, businessmen and contractors otherwise unspecified	4,316
189	Cashiers, accountants, book-keepers, clerks and other employees in unspecified offices and warehouses and shops	4,019
191	Labourers and workmen otherwise unspecified	100,292

STATEMENT No. 20.

Statement showing the population of workers items of Sub-Class XII—Unproductive (30,272).

Group No.	Description	Workers of all kinds
192	Inmates of jails, asylums and almshouses	1,443
183	Beggars and vagrants	28,355
191	Procurers and prostitutes	67
196	Other unclassified non-productive industries	406

11 OCCUPATIONS OF WOMEN

The female population of the Agency has been returned as 1,973,496 of whom 123,682 have been returned as earners, 301,728 as working dependents and 1,548,186 as non-working dependents. In other words out of every 1,000 females 216 are workers, and 784 are non-working dependents. There are however 722,077 females aged under 10 and over 65 and if these be excluded as incapable of work, 634 females per mille of females aged from 10 to 65 are either principal earners or working dependents. In the statement below (No. 21) a comparison is made between the Agency and the Bombay Presidency and Gujarat.

STATEMENT No. 21

Category	Western India States Agency	Bombay Presidency	Gujarat
1	2	3	4
Workers	216	216	453
Population aged 10 to 65	634	619	684
Non-Working Dependents	784	784	567
Population aged under 10 and over 65	366	351	216

—PROPORTION PER MILLE..OF FEMALE..WORKERS..TO MALE..WORKERS—
—IN—
—WESTERN..INDIA..STATES..AGENCY—

The high ratio for Gujarat in respect of the female population aged from 10 to 55 is due to the extent to which women there are engaged in agriculture

The statement below (No 22) shows the chief female occupations and the number of females engaged in them, relatively to 1,000 males

STATEMENT No 22

Occupation	Number of females per 1,000 males	Actual figures
Agricultural Labourers	1,309	217,117
Forestry	819	1,063
Textiles	161	15,484
Basket-makers and other industries of wood materials etc	602	1,256
Rice pounders, huskers and flour grinders	20,719	2,652
Grain parchers	2,711	152
Washing and cleaning	682	1,032
Scavenging	599	2,608
Dealers in dairy products and eggs, etc	2,300	2,015
Trade in fuel	2,167	3,035
Midwives, vaccinators, compounders, nurses, masseurs	813	565
Procurers and prostitutes	8,571	60

The number of prostitutes is much under-estimated. Probably some of the prostitutes have returned themselves as dancers, musicians and actors. But even so, the number is too low and there must have been much concealment in the enumeration, a state of affairs which is intelligible.

12 SUBSIDIARY EARNERS

o

The percentage of subsidiary earners to principal earners returned in the 1931 Census is only 2.9. This figure is absurd. The Bombay Presidency figure is 6.3, which is itself inadequate. The statistics of subsidiary occupations must be considered to be completely unsatisfactory and it is useless offering any comment upon them. The statement below (No 23) shows briefly the nature of the Census returns.

STATEMENT No 23

Class	Description	Percentage of subsidiary earners to principal earners
A	Production of Raw Materials	1.4
B	Preparation and Supply of Material Substances	0.9
C	Public Administration and Liberal Arts	0.3
D	Miscellaneous	0.3

CHAPTER VIII—OCCUPATION

SUMMARY TABLE I (A)

Distribution of Extracts and Working Dependents

Class, Sub-Class and Order	Number of Earners and Working Dependents per 10,000 of the total population.	Percentage recorded in	
		Urban industrial areas and cities.	Rural areas.
		3	4
Non-Working Dependents	6,118	3.3	95.4
All Classes	3,863	3.3	97.2
Class A—Production of Raw Materials	2,334	0.3	99.7
Sub-Class I—Exploitation of Animals and Vegetation	2,308	0.3	99.7

SUMMARY TABLE III

Principal Earners and Working Dependents and Final Occupation.

Group No.	Occupation.	Principal Earners and Working Dependents.		Proportion of females to 1,000 males.
		Males.	Females.	
1	2	3	4	5
	TOTAL ALL CLASSES	1 127,841	423,219	377
	Class A—Production of Raw Materials	634,812	234,723	444
	Sub-Class I—Exploitation of Animals and Vegetation	629,808	232,561	446
	Order 1—Pasture and Agriculture	629,073	232,321	444
	Sub-order 1 (a)—Cultivation	607,823	217 700	483
1	Non-cultivating proprietors taking rent in money or kind	31,077	4,093	134
3	Cultivating owners	62,440	11,694	17
6	Tenant cultivators	279,216	41 171	114
7	Agricultural labourers	106,129	217 517	1,240
	Sub-order 1 (b)—Cultivation of special crops, fruit, etc. (Flowers, manure, herbs and labours).	4 740	903	101
1	Market gardeners, flower and fruit growers	4 726	903	139
	Sub-order 1 (c)—Fumery	4 743	4,093	819
18	Wood cutters and charcoal burners	2,746	2,233	877
19	Collectors of forest produce	322	651	1,789
	Sub-order 1 (d)—Stock raising	87,866	10,507	178
21	Cattle and buffalo breeders and keepers	29,567	7 452	242
22	Horsemen, shepherds and breeders of other animals	23,417	2,713	97
	Order 2—Fishing and Hunting	1,807	867	370
	Sub-class II—Exploitation of Minerals	2,306	1,301	337
	Order 4—Non-Metallic Minerals	2,300	1,300	236
40	Salt, sulphate and other saline substances	1,291	218	213
	Class B—Preparation and Supply of Material Substances	307,386	68,417	180
	Sub-Class III—Industry	106,394	22,744	226
	Order 5—Textiles	22,396	12,454	461
42	Cotton ginning, cleaning and pressing	2,813	2,114	396
43	Cotton spinning, sewing and weaving	18,906	9,078	478
44	Rope twine string and other fibres	4,043	1,569	283
45	Wool carding, spinning and weaving	2,706	2,033	673
47	Silk rearing and weaving	264	113	310
	Order 6—Hides, skins, and hard materials from the animal kingdom.	14,296	1,847	120
51	Working in leather	12,714	1,326	123
56	Basket makers and other industries of esdy materials, including leaves, and baskets and baskets working with bamboo, reeds or similar materials.	2,686	1,526	803
	Order 9—Ceramics	12,721	5,791	306
63	Potters and makers of earthenware	12,663	5,648	326
	Order 10—Chemical products properly so called, and analogous.	4,803	966	211
66	Manufacture and refining of vegetable oils	4,826	967	171
	Order 11—Food Industries	6,118	3,621	392
71	Rice pounders, millers and flour grinders	123	2,632	20,718
72	Cereal processors, etc.	86	183	2,714
	Order 12—Industries of dress and the toilet	81,818	4,212	122

CHAPTER IX—LITERACY

1 DEFINITION OF LITERACY AND MEANING OF THE STATISTICS.

The standard fixed for literacy was the capacity to write and read a letter to and from a friend. On the whole the enumerators have understood and acted upon these instructions. In compiling the proportion of literacy per cent. or per thousand children of 8 years of age and under returned as literate have been ignored and in dealing with selected castes those under 7 years of age have been assumed to be illiterate. No record was compiled of the vernacular script in which literacy was returned.

Imperial Table VIII describes literacy by age and religion and Imperial Table XVI gives details of literacy for selected castes. Provincial Table II deals with literacy by religion and among Hindus the literacy of Brahmans, of depressed and other Hindus has been separately shown in that Table for each State. At the end of this chapter will be found six Subsidiary Tables based on the figures recorded in the Imperial Tables. The Subsidiary Tables are —

- 1 Literacy by age sex and religion
- 2 Literacy by age sex and locality
- 3 Literacy by religion sex and locality
- 4 Literacy in English by age sex and locality
- 5 Literacy by selected castes
- 6 Progress of literacy since 1901

Maps and Diagrams

The following maps and diagrams have been prepared to present the statistical material used in the present chapter —

- (i) Map showing literates per mille of the total population in the States of the Western India States Agency
- (ii) Diagram showing the number of literates per mille by religion
- (iii) Diagram showing the number of literate males in every 1 000 males in selected castes.

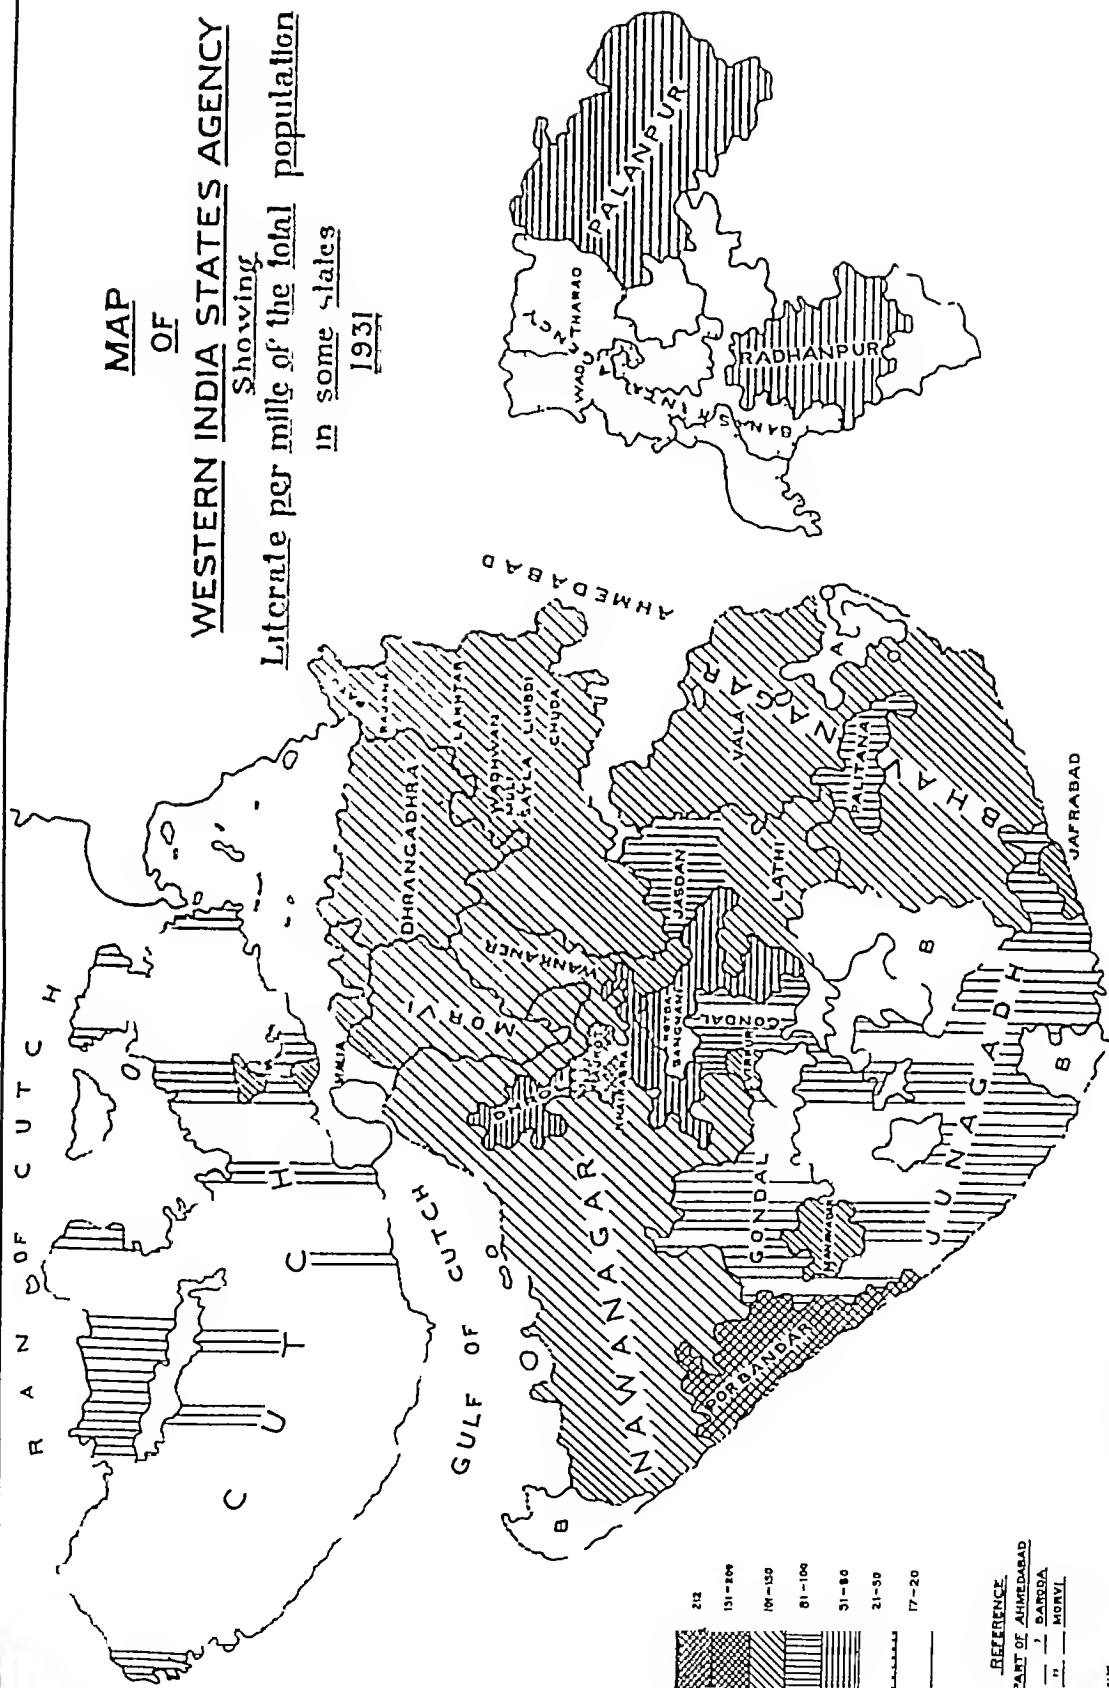

2 INFLUENCES AFFECTING LITERACY

The general character of the Agency has been described already. The bulk of the population is agricultural though less so than in the Bombay Presidency. There is a balance of emigration to a considerable extent taken up by trading communities there is an important commercial and trading class, and there are areas of very low density and poor soil. These various influences on literacy pull often against each other. Industry is almost wholly unorganised and of the cottage and individual worker type. The Muslims are mostly town-dwellers artisans and traders. From these facts certain remarks about the standard of literacy can safely be made. The problem of education is always not the education of the trader and the craftsman but the education of the agriculturist and the labourer. As agriculture is relatively less important in the Agency than in Bombay Presidency and industry is relatively more important slightly better literacy figures might be expected in the Agency than in Bombay Presidency generally. Furthermore the kind of emigration typical of the Agency is the kind which encourages literacy except in the case of the labourers who go to Sind and elsewhere for manual work. The high degree of urbanisation in the Agency is also in favour of the literacy of the Agency and so is the importance of a prosperous trading class. Finally the standard of education amongst Muslims might be expected to be fairly high certainly higher than the Bombay Presidency figures which are depressed by the dead weight of Muslim illiteracy amongst the agricultural population of Sind. In the Agency the Hindus are mostly in the fields and villages and the Muslims in the towns, and this reacts on the comparative standard of literacy.

3 EXTENT OF LITERACY

Out of a total population of 3 999,230 persons, 421,349 have been returned as literate at the 1931 Census. The number of literates returned at the 1921 Census

MAP

Literate per mille of the total population
in some states
1931

REFERENCE
A. PART OF AHMEDABAD
B. — — — BARODA
C. — — — MORVI

was 349 076 There has therefore been very considerable improvement in literacy in the last ten years

The statement below (No 1), shows the number of literates in 1931 and 1921 for important units of the Agency

STATEMENT No 1

States and Agencies	Number of literate males per 1 000 of the male population in	
	1931	1921
1	2	3
Western India States Agency	204	165
Cutch	208	152
Bhavanagar	254	208
Gondal	165	240
Nawanagar	230	153
Junagadh	186	156
Palanpur	110	88
Rest of the Western India States Agency	213	164

The general improvement is very marked. The only exception is Gondal. If the Census figures are accurate this time and were accurate last time there has been in Gondal a set-back of a serious nature. A possible explanation of the phenomenon may lie in the fact that the population of Gondal has increased much more than the population of the Agency as a whole and than the population of most units, namely by 22.2 per cent as against 12.9 in the Agency as a whole. Reference to Imperial Table XVII will show that in the Gondal State the Hindu population is 163 319 out of a total population of 205,846 and that in the Hindu population the Kanbi population numbers 63,674, and that Intermediate Hindus number 121,633. These classes must have grown in numbers very considerably in the past decade. They are classes in which literacy is patchy and generally backward. It is quite obvious in these circumstances that if population grows more rapidly than educational facilities, as is certain to have happened in the case of Gondal, the result will be a fall in literacy all the greater, because of the very rapid increase in the population of the State. It will be seen from Subsidiary Table V at the end of the present chapter that amongst Kanbis generally in the Agency (excluding Bhavnagar) only 55 are literate per mille, a figure which is lower than any except those for literacy amongst Bharwads, Bhangis, Dheds, and Vaghris. It seems thus to be certain that an increase in the illiterate Kanbi population in Gondal must be the chief reason for the serious decline in the standard of literacy in the State.

In the statement (No 2) which follows standards of literacy are compared for the Agency, Gujarat, Baroda, and British districts of the Bombay Presidency

STATEMENT No 2

Area	Literate	
	Males	Females
Western India States Agency	204	43
Gujarat	254	46
Baroda	330	79
British districts	176	31

The statement should be considered along with the general remarks on literacy in section 2 above. It will be noticed that the Agency figures are better than those for male literacy in British districts of the Presidency and much better for female literacy. Not much importance attaches to the latter fact as the number of literate females in the Agency is only 0.757 as compared with 273,375 in British districts of the Bombay Presidency and higher ratios in small figures are statistically of less importance than lower ratios in large figures as any one familiar with arithmetical averaging will recognise. The figures of literacy in Gujarat are much better than in the Agency and the Baroda figures better still. The subject of comparative literacy in Gujarat and Baroda has been discussed in the Bombay Presidency Census Report 1931 and interested readers may be referred to that Report. Improvement in the standard of literacy depends almost entirely on two main factors (a) the provision of educational facilities and (b) the comparative numbers of illiterate sections of the population as for instance in the case of the Bombay Presidency the numbers of the depressed and backward classes, and of Muslims in Sind. The Agency in some ways with its shorter distances between comparatively large towns and villages is more favourably placed than many parts of the Bombay Presidency for improving literacy. No statistics are available for the Agency in respect of primary education and the provision of educational facilities. In this as in vital statistics, there is much room for improvement and it is hoped that before next Census something will have been done to remedy what is a serious deficiency in the public records of this part of India. Without educational statistics the Census figures can be only partially useful.

4 FEMALE LITERACY

The statement (No. 3) below gives the comparative figures for female literacy for the last two Censuses.

STATEMENT No. 3.

Dist.	Number literate per mille of total females in	
	1931	1921
1		2
Western India States Agency	43	30
Cutch	38	24
Bhavnagar	64	50
Gondal	37	56
Nawanagar	47	27
Junagadh	29	23
Palanpur	11	8
Rest of the Western India States Agency	49	30

These figures show that apart from Gondal all parts of the Agency show improvement in female literacy in the last ten years. The low ratio in Palanpur is explained by the backward nature of that part of the Agency. Banas Kantha shows still poorer results.

In the following statement (No 4) female literacy per mille is shown for important units at the 1931 Census

STATEMENT No 4

Unit	Number per mille.
Western India States Agency	43
A—Seventeen Salute States	46
Cutch	38
Junagadh	29
Nawanagar	47
Bhavnagar	64
Porbandar	105
Dhrangadhra	60
Palanpur	11
Radhanpur	17
Morvi	33
Gondal	37
Jafraabad	49
Wankaner	62
Palitana	51
Dhrol	18
Limbdi	78
Rajkot	118
Wadhwan	62
B—Eastern Kathiawar Agency	46
C—Western Kathiawar Agency	40
D—Banas Kantha Agency	7

It will probably be found on analysis that the standard of female literacy, which differs very considerably in the various units, depends upon the extent of urbanisation and the comparative size of the units in square miles. In this respect the units are of the most diverse character. In such circumstances, places like Cutch cannot be expected to provide such a standard of female literacy as prevails in places like Porbandar, Rajkot, Bhavnagar or Limbdi. The educational problem in fact differs entirely according to local circumstances and there is no general policy of educational advance which can be applied consistently over the maze of diverse local conditions.

5 LITERACY BY RELIGION

**DIAGRAM SHOWING THE NUMBER OF LITERATES
PER MILE BY RELIGION
1931**

P.O. 10, 1931.

The statement below (No. 5) shows literacy by religion in the Agency at the 1931 Census.

STATEMENT No. 5

Religion.	Number literates per mille of the population of each religion and each sex.			Religion.	Number literates per mille of the population of each religion and each sex.		
	Persons.	Males.	Females.		Persons.	Males.	Females.
1	2	3	4	1	2	3	4
All Religions	128	204	43	Zoroastrian	843	907	529
Hindu	104	194	35	Christian	744	786	708
Muslim	136	223	23	Total	31	37	27
Jain	419	671	106	Other Religions	814	543	426

Only the Hindu, Muslim and Jain religions are numerically important as Imperial Table XVI will show. The extent to which Muslim literacy surpasses Hindu literacy is clearly brought out. Muslim literacy of females is however inferior to Hindu literacy of females the well known prejudices of Muslims against the education of women being hard to overcome even in a Muslim community that is largely town-dwelling artisan and trading in character. The standard of literacy amongst Jains is high, as is to be expected of a prosperous trading community.

6 LITERACY BY AGE GROUPS.

The statement below (No. 6) shows the proportions of literates at certain age periods of each sex per mille of the population of each sex, at the 1931 Census.

STATEMENT No. 6

Sex.	All ages 16 and over	15-20.	20 and over
------	----------------------	--------	-------------

The highest ratio is naturally found at present in the middle age group. As education advances however it is to be expected that the improvement will be carried over into the highest age-group. At present there is a great deal of leeway to make up in the literacy of adults. The next Census, however, is almost certain to show an advance in adult literacy as the advance shown in the middle age-group passes into the higher age-group. Literacy is of course an accomplishment which is difficult to acquire in adult life.

7 LITERACY IN SELECTED CASTES

G.P.O. PUNNA 1932

The main statistics will be found in Subsidiary Table V at the end of the present chapter. The attention of students is directed to a study of it. The statement (No 7) given below shows some of the salient facts revealed by that Table.

STATEMENT No 7

Class	Caste	Number per 1,000			Class	Caste	Number per 1,000		
		Persons	Males	Females			Persons	Males	Females
Advanced	1 Brahman Audich	415	637	187	Intermediate contd	7 Kumbhar	63	115	12
	2 Sonar	378	635	122		8 Kanbi	55	104	4
	3 Lohana	368	607	120		9 Bharwad	5	9	1
	1 Ghanchi	215	400	10	Other Back ward	1 Vaghri	14	25	1
Intermediate	2 Darji	190	350	48		1 Chambhar	72	128	9
	3 Sutar	107	355	37	Depressed	2 Mahar Dhedi	9	17	1
	4 Mali	103	156	45		3 Bhargi	8	16	
	5 Hajam	94	160	10					
	6 Dholi	85	147	22					

The great variations in literacy in the class of Intermediate Hindus is noteworthy. The backwardness of the Kanbi population in literacy has already been commented upon. Actually literacy is a bad principle of classification amongst Hindus, whose social system is based on quite other lines. Generally speaking literacy amongst Hindus depends mostly on the kind of occupation followed. The castes which are engaged in Government service and administrative work show usually the highest standard of literacy and the trading castes come next. The agriculturists are usually a bad third and at the foot comes the great mass of manual workers, labourers and performers of menial tasks. The backwardness of the Bharwals or Dhangars is not surprising when the nomadic nature of these people is remembered. The Chambhars show a comparatively high standard of literacy considering their social status. Some explanation of this may be found from a study of Imperial Table VI B forming part of the occupational statistics. This shows their tendency to leave their traditional occupation and indulge in a variety of employments which has had the effect of breaking down the barriers within which their caste occupation would confine them. There is little doubt that the operation of the caste system in certain levels of Hindu society is one of the greatest obstacles to the growth of literacy and education in India. As regards Muslims, Subsidary Table A at the end of the present chapter demonstrates the high standard of literacy achieved by the Shia Bohras, a progressive trading community. They show better figures than any of the Hindu castes and in respect of female literacy they are surpassed only by Audich Brahmans, Svetambar Jains and Zoroastrians.

8 LITERACY IN ENGLISH

The comparative proportions of literacy in English per 10 000 of the total population of each sex by religion is shown in the statement below (No 8) for the last two Censuses.

STATEMENT No. 8

Religion.	1921			1931		
	Persons.	Males.	Females.	Persons.	Males.	Females.
1	2	3	4	5	6	7
All Religions	91	174	9	80	183	8
Hind.	74	141	4	62	154	3
Muslim.	6	15	3	25	104	2
Jain.	396	814	19	324	664	14
Zoroastrian	4,977	6,161	3,061			
Christian	4,334	4,706	334			

Figures not available

These figures show general improvement especially in English literacy amongst males.

9 PROGRESS OF ENGLISH LITERACY SINCE 1901

The progress in English literacy during the last thirty years is made manifest by the figures given below

STATEMENT No. 9

Year	Number per 10,000 of the population literate in English.		
	Persons	Males.	Females.
1	2	3	4
1901	40	77	3
1911	52	101	3
1921	80	153	6
1931	91	174	6

Subsidiary Table VI at the end of this chapter gives the corresponding figures for general literacy for three main age-groups. The following brief summary for the age-group, 15 to 20 years, is stated here for comparison

Year	Males	Females
1901	204	20
1911	223	36
1921	260	73
1931	252	66

The fall in the 1931 figures for males is doubtless accounted for by the increase in population being more than proportionate to the growth of literacy, a result due largely to the inability of educational machinery to respond immediately to a rapid rise in population. There has actually been an increase in the ratio as between 1931 and 1921 for both males and females for all ages, 10 years and over, namely 225 as against 218 for males and 45 as against 38 for females

SUBSIDIARY TABLE I
Literacy by age, sex, and religion

Religion	Number per mille who are literate								
	All ages 5 and over			5—10		10—15		15—20

CHAPTER X—LANGUAGE.

1 REFERENCE TO STATISTICS

The statistics discussed in the present chapter are found in Imperial Table XV Parts I and II and in Subsidiary Tables I and II. Subsidiary Table III—a comparison between caste and language tables—has not been prepared as no castes speaking tribal languages such as Bhili, Kankans etc were found in large numbers. Imperial Table XV Part I shows the distribution of the population of males and females speaking languages of the Agency as mother tongue. Part II of the same Table indicates the extent to which bilingualism is characteristic of the population.

Subsidiary Table I shows the distribution of the total population by mother tongue and the number per mille speaking each of the languages enumerated. Subsidiary Table II shows the distribution of the total population for each unit by mother tongue and subsidiary languages and the proportions of speakers of each. The linguistic map showing important languages spoken as mother tongue and main bilingualism is printed opposite this page.

2. INSTRUCTIONS.

Column 14 (Language)—Enter each person's mother tongue. In the case of infants and deaf mutes the language of the mother should be entered.

Column 15 (Subsidiary language)—Enter the language or languages habitually spoken by each person in addition to his mother tongue in daily or domestic life."

3 GENERAL FEATURES.

The Agency is a compact language area with one language, except in one local area in undisputed predominance. The result of such a condition of things is to simplify language problems and to make bilingualism of minor importance. The Agency is an area of emigration, which still further tends to consolidate the predominance of the prevailing language. Gujarati is the predominant language of the Agency and is spoken by 87 per cent. of the population. Next in importance is Kachchhi which has a localised area in Cutch and is not spoken much outside Cutch. This language is spoken by 10.3 per cent. of the population. The third language in importance is Western Hindi spoken by only 1.7 per cent. of the population. No other language is numerically important and in fact only 1 per cent. of the population in all speaks other languages.

4 DISTRIBUTION OF GUJARATI.

The statement below (No. 1) shows the distribution of Gujarati.

STATEMENT No. 1

States and Agencies.	Total population in thousands.	Gujarati-speaking population in thousands.	Percentage of Gujarati speakers to total population.

C—Western Kathiawar Agency	382	353	92
D—Banas Kantha Agency	204	166	81

The absolute predominance of Gujarati is very marked. Only in Cutch is it spoken by a minority of the population. In no other unit is it spoken by less than 87 per cent of the population and in most units the percentage of Gujarati speakers is well over 90 per cent of the population.

5 DISTRIBUTION OF KACHCHHI

The statement below (No 2) shows the distribution of Kachchhi.

STATEMENT No 2

Unit	Number of Kachchhi speaking persons in thousands	
Western India States Agency	--	412
Seventeen Salute States	--	388
Cutch	--	295
Junagadh	--	28
Nawanagar	--	21
Bhavnagar	.	2
Porbandar	--	4
Morvi	--	2
Gondal	--	34
Rajkot	--	1
Western Kathiawar Agency	--	23

It will be noted that 295 thousand of the 412 thousand speakers of this language are in Cutch, the only area in which the absolute supremacy of Gujarati is seriously challenged.

8 DISTRIBUTION OF WESTERN HINDI

The distribution of Western Hindi is shown by the following statement (No. 3)

STATEMENT No. 3.

Unit.	Number of Western Hindi-speaking persons in thousands.
Western India States Agency	67
Seventeen Salute States	61
Cutch	1
Junagadh	42
Nawanagar	3
Bhavnagar	3
Porbandar	1
Palanpur	6
Radhanpur	2
Jafrabad	1
Rajkot	1
Wadhwan	1
Eastern Kathiawar Agency	2
Western Kathiawar Agency	5

It will be seen that 42 thousand of the 67 thousand speakers of the language are in Junagadh which is peculiar in the Agency in having a high proportion of Muslims in its population, namely 104 964 out of a total population of 545 182. But it will be obvious that even there a majority of Muslims must speak Gujarati and many of them must speak both languages, though the statistics of bilingualism in Imperial Table XV Part II do not bring this out as clearly as they might do

7 DISTRIBUTION OF MINOR LANGUAGES.

STATEMENT No. 4.

	Number in thousands.
(1) <i>Rajasthani</i> —Distribution—	
Western India States Agency	23
Seventeen Salute States	17
Cutch	1
Palanpur	14
Banas Kantha Agency	6
(2) <i>Bindhi</i> —Distribution—	
Western India States Agency	6
Cutch	2
Junagadh	1
Radhanpur	1
Western Kathiawar Agency	1
Banas Kantha Agency	1
(3) <i>Marathi</i> —Distribution—	
Western India States Agency	2
Seventeen Salute States	1
Rest of the Western India States Agency	1
(4) <i>Persian</i> —Distribution—	
Western India States Agency	2
Nawanagar	2

It will be seen that most of the Rajasthani speakers are in Palanpur, which adjoins Rajputana and that one-third of the Sindhi speakers are in Cutch, which marches with Sind, of whose main language, Sindhi, Kachchhi is linguistically considered to be a dialect. It is not clear why the Persian speakers are concentrated in Nawanagar. The Census offers no explanation of this fact.

8 BILINGUALISM

Imperial Table XV, Part II, gives the main statistics. The following summary of that table will be found interesting.

STATEMENT No 5.

Main Language	Total number of persons speaking mother tongue (000 s)	Total number of persons speaking subsidiary languages (000 s)	Number in thousands speaking						
			Subsidiary languages						
			Gujarati	Western Hindi	Kachchhi	Rajasthani	Marathi	Sindhi	English
1	2	3	4	5	6	7	8	9	10
Gujarati	3 484	47		5	33		1	1	8
Kachchhi	412	94	89	5					
Western Hindi	67	33	31		1	1			
Rajasthani	23	4	3						
Sindhi	6	2	2						
Marathi	2	1	1						
Persian	2	1	1						
Arabic	1								
English	0 5	0 1							

Bilingualism is not a marked feature of the Agency. This is due to the supremacy of Gujarati. The highest degree of bilingualism is shown by Western Hindi, in which 33 thousand persons out of 67 thousand are bilingual. All but 2 thousand of them are bilingual in Gujarati. Of 412 thousand Kachchhi speakers 94 thousand are bilingual, 89 thousand in Gujarati and 5 thousand in Western Hindi. The bilingualism in Gujarati is low, only 47 thousand out of 3,484 thousand speakers. Of these 33 thousand are bilingual in Kachchhi and 5 thousand in Western Hindi. The most interesting area from a bilingual point of view is Cutch, where two main languages are competing against each other. A local examination of this area would probably yield results of value to language scholars. In Palanpur and the Banas Kantha Agency, Rajasthani and Gujarati are in competition but the area there is smaller and most of the Rajasthani speakers are probably of the labouring class who retain connections with the adjacent territory of Rajputana. As a written and literary language Gujarati has no serious competitor in the Agency. The statistics of bilingualism are not fully satisfactory. There is little doubt that the Muslim population tend to return Western Hindi as their mother tongue where they speak this language, though, in many cases, Gujarati has a better claim to be regarded as the mother tongue. It seems certain that most of the speakers of Western Hindi understand Gujarati as well, even where they do not normally use it in their domestic circles. The statistics of bilingualism in more than one language are not reliable enough to be worthy of comment. Nor is comment necessary on bilingualism in English. The section of Imperial Table, Part II, dealing with it is self-explanatory.

SUBSIDIARY TABLE I.

Distribution of total population by mother tongue according to Census

Family Sub-Family Branch and Sub-Branch.	Group and Sub-Group.	Language.	Total number of speakers in thousands.		Number per mille of the population in 1921.	Where chiefly spoken.

CHAPTER XI—RELIGION.

1 REFERENCE TO STATISTICS

The religious distribution of the population of the Agency is shown in Imperial Table XVI. The important features of the statistics are further set out in six Subsidiary Tables showing (1) the general distribution of the population by religion, (2) the distribution of the population of each unit by main religions, (3) the actual number of and variations in the population by main religions since 1881, (4) the number of and variations in the Christian population since 1881, (5) the distribution of the population by religion in urban and rural areas and (6) the distribution by religion of each 10,000 of the population.

Map and Diagrams

The following map and diagrams have been prepared to present the statistical material used in this Chapter —

- (i) Social map showing for each unit the percentages of those belonging to the most numerously represented religions
- (ii) Diagram showing distribution of the population by religion
- (iii) Diagram showing variation in the population by main religions, taking the figures for 1881 for each religion as 100

2 INSTRUCTIONS

In respect of column 4 of the General Schedule the following were the instructions —“ Enter here the religion which each person returns as Hindu, Muslim, Sikh, Jain, Christian and Parsee and the sect where necessary. In the case of Aboriginal tribes who are not Hindu, Buddhist, Christian, etc., the names of the tribe should be entered in this column. Sect is in all cases required for Christians, Muslims and Jains ”

3 GENERAL DISTRIBUTION

The general distribution of the population according to the 1931 Census shows that out of every 1,000 persons in the Agency 811.9 are Hindus, 136.4 are Muslims and 50.9 are Jains. Christians, Zoroastrians and Tribals together amount to less than one person per 1,000. The Agency is an area of marked Hindu predominance, there being on an average six Hindus to every Muslim. The distribution shows however considerable variations in different localities. The Hindu ratio per 10,000 of the population varies from 9,841 in Patdi to 5,982 in Malia. The Muslim ratio varies from 3,741 in Malia to 70 in Patdi. The Jain ratio varies from 2,034 in Wadhwan Civil Station to 4 in Jafrabad. The number of Zoroastrians, Christians, Tribals and Other Religions is trivial, the total figures being only 871, 1,396, 862, and 158 respectively. Detailed comment on such small totals is not called for. The distribution of Christians can however be studied in Subsidiary Table IV at the end of the present Chapter. In only five units does the number of Christians exceed 100, namely Junagadh (150), Nawanager (137), Bhavnagar (277), Porbunder (138) and Rajkot Civil Station (287).

4 MAIN VARIATIONS SINCE 1921

The statement (No 1) below shows the main variations in four religions since 1921.

STATEMENT No 1

States and Agencies	Hindu		Muslim		Jain	
	1931	1921	1931	1921	1931	1921
Western India States Agency	3,346,768	3,850,500	545,560	487,612	203,638	189,610
Cutch	330,997	311,481	120,286	110,525	62,446	61,375
Bhavnagar	433,260	368,975	42,746	36,962	23,570	20,017
Gondal	163,340	129,455	35,674	31,283	6,768	6,264
Nawanagar	326,894	275,550	58,553	50,340	23,484	19,346
Junagadh	433,125	368,003	104,964	90,091	6,853	7,216
Palanpur	222,714	200,591	28,690	24,977	12,542	11,087
Rest of the Seventeen Salute States	585,486		72,428		34,044	
Eastern Kathiawar Agency	248,267	1,206,495	19,878	148,445	14,656	64,805
Western Kathiawar Agency	318,151		53,885		9,245	
Banas Kantha Agency	184,525		8,985		10,009	

STATEMENT No. 1—*contd.*

States and Agencies	Christian		Increase per cent. 1871-91			
	91	1911	Hindu	Muslim	Jain	Christian
Western India States Agency	1,226	1,872	12.5	+11.9	7.4	30.2
Cutch	54	67			1.4	+24.5
Dharwar	277	347	17	1	17	+25
Gondal		79	19.2	1.1		— 7.8
Kanungpur	1.7	14	— 0	+14	2.1	+197.9
Jamnapur	136	20	+1.7	1	— 9	+66.7
Palanpur	7	25	1.0	1.9	1.1	64.2
Rest of the Revenue States of Ind.	200					
Eastern Kutch Agency	53	97	14	7.3	+5.7	
Western Kutch Agency	217					
Rajm Kutch Agency	8					

It will be seen that in the Agency as a whole the Hindu population has increased relatively faster than the Muslim 12.5 as against 11.9 per cent. The striking increase in the Hindu population of Gondal has been noticed in the Chapter on Literacy and must undoubtedly be one of the chief reasons for the fall in that state of the general standard of literacy. In all the chief units shown the Hindu population has increased relatively faster than the Muslim. The much smaller gross numbers of Jaina and Christians discounts for practical effect some of the high increases shown in certain units for these religions.

5. DISTRIBUTION OF POPULATION BY RELIGION.

The statement below (No. 2) shows the composition of the religious distribution in detail at the 1931 Census.

STATEMENT No. 2.

Hindu	1,000
(i) Advanced	128.0
(ii) Intermediate	715.8
(iii) Primitive	4.4
(iv) Other Backward	51.4
(v) Depressed	97.4
Muslim	1,000
(i) Shia	117.3
(ii) Sunni	882.1
(iii) Others and sect not returned	0.0
Jain	1,000
(i) Svetambar	933.3
(ii) Digambar	47.9
(iii) Others and sect not returned	18.8
Christian	1,000
(i) European British subjects	148.3
(ii) European and Others	22.2
(iii) Anglo-Indian	306.6
(iv) Indian Christian	522.9

DISTRIBUTION OF THE POPULATION BY RELIGION
(PER MILLE OF THE TOTAL POPULATION)
IN WESTERN INDIA STATES AGENCY

HINDU

MUSLIM

JAIN

Note:— The proportions of other religions are insignificant

VARIATION IN THE POPULATION BY MAIN RELIGIONS
(IN W I STATES AGENCY) TAKING THE FIGURE
FOR 1881 FOR EACH RELIGION AS 100

HINDU —————
MUSLIM - - - - -
JAIN — x — x — x — x —
CHRISTIAN o - - - - - o - - - - -

It will be noticed that seven out of every ten Hindus belong to the Intermediate class. This fact has a considerable bearing on the amount of literacy in the Hindu community. Of the total Christian population of the Agency more than half consists of Indian Christians. The difference between the Hindu and Muslim population as regards urban and rural residence is made clear in Subsidiary Table V. This demonstrates that of the Hindu population 563,637 live in urban areas as against 2,683,131 living in rural areas, that is 17 per cent are urban dwellers and 83 per cent are rural dwellers. In the case of Muslims 241,388 or 44 per cent are urban dwellers and 304,181 or 56 per cent are rural dwellers. In the case of Jains, 76,282 are urban dwellers and 127,344 are rural dwellers, that is, 38 per cent live in towns, and 62 per cent live outside towns, which of course includes all villages not large enough to be classed as towns.

SUBSIDIARY TABLE I

CHAPTER XII—RACE CASTE AND TRIBE.

1 REFERENCE TO STATISTICS.

The figures under discussion in this chapter are compiled in Imperial Tables XVII and XVIII. In Table XVII important Castes Tribes and Races are dealt with. In Table XVIII variations in selected castes (Primitive Tribes) have been given from 1881. Imperial Table XIX shows certain details regarding Europeans and Anglo-Indians.

2 INSTRUCTIONS.

Column 8 in the General Schedule was headed "Race Tribe or Caste"

The directions on the cover of the Enumeration Book were as follows —

"Column 8 (Caste).

"For Indian enter caste as ordinarily understood but for wide castes enter sub-castes also. The class titles—Brahman Kshatriya, Vaishya and Sudra are usually insufficient by themselves. For other subjects of the Empire and for foreigners enter race as Anglo-Indian Canadian etc. For Indians, such as some Christians who have neither caste nor tribe enter Indian."

In the Code the following additional instructions were issued —

Column 8.—Care must also be taken to see that the real caste is entered in column 8 of the Schedule and not the name of a sub-caste only or of an exogamous group or title or a word merely indicating locality or occupation. Thus *bania* is a functional term including many different castes such as Agarwal Oswal Mehar, etc. words like Bengal Hindustani, Madras, Nepali must be rigorously refused in the case of all Hindus. Sikh is not the name of a caste but a religion. Muslims are divided not only into racial groups, such as Sheikh Sayyad Moghal and Pathan, but also into functional groups such as—Jolaha Momin, Tamboli etc. In the case of the following you should enter the sub-caste name —

(1) *Brahman*.—Ask what sort of Brahmin as Dehartha, Nagar Modh etc. As separate statistics are to be shown in the Imperial Table, with regard to Kshatriya and Kayasthas (Valmik) and for Amils in Sind, they should be distinctly shown accordingly.

A section of Bhatas which regards itself as of Brahman origin and which intends to return its caste as Brahmanhat Brahman should be shown as Brahmanhat as distinct from other sub-castes of Bhat.

(2) *Vani*.—*Bani*.—Ask what sort of Vani. You should not accept the words Shrivak or Mehar which are religious terms. But should get the caste name as Oswal Shimali.

(3) *Kanbi* and *Kunbi*.—You should in all cases ask what kind of Kanbi or Kunbi. In Gujarat and Khandesh all Kanbas and Kumbes will know the name of their sub-castes and you should enter what they say.

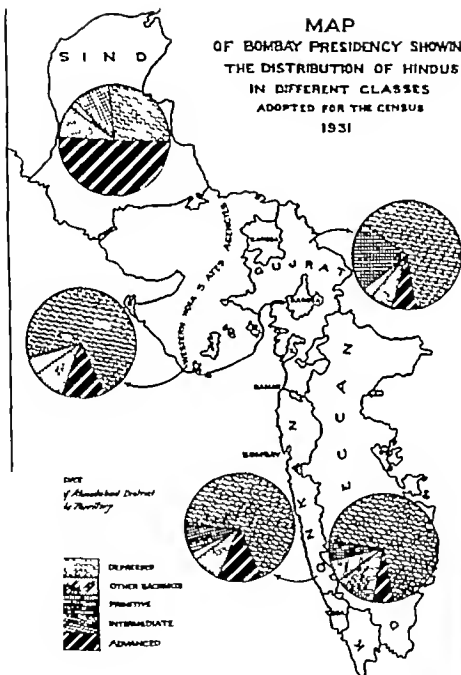

(4) *Koli*.—In Gujarat it is not necessary to enter the sub-caste names such as Khandi Bania etc. and for Muslims, just as for Hindus you should record them as Sheikh Sayyad, Pathan, Pinjar Bohra etc. The word Sindhi should on no account be accepted as a caste name. But all Muslims returning the word Sindhi should be asked what kind of Sindhi and the name given by them recorded."

3 ACCURACY OF THE RETURN

Caste being one of the most familiar features of the Indian population it is safe to say that the return is reasonably accurate. But in a few cases here and there owing to insufficient information returned or through the negligence of enumerators to make further enquiries some functional names were recorded as castes.

At this Census an innovation has been introduced into the Caste Table (XVII). Hitherto figures of population have been given for individual castes, selected by

MAP
OF BOMBAY PRESIDENCY SHOWING
THE DISTRIBUTION OF HINDUS
IN DIFFERENT CLASSES
ADOPTED FOR THE CENSUS
1931

the Provincial Superintendent of Census by reason of the necessity to preserve continuity or on account of the numerical or social importance of the caste or in order to demonstrate functional or occupational peculiarities. But no previous attempt has been made to portray in broad outline the main divisions in Hindu society created by literacy and economic status. The Hindu community has thus been separated into the following divisions and the arrangement of the figures of population in Imperial Table XVII is according to these divisions —

- (1) Hindu—Advanced
- (2) Hindu—Intermediate
- (3) Hindu—Primitive
- (4) Hindu—Other Backward
- (5) Hindu—Depressed

The map shows the numerical strength of these divisions as sections of a circle. The map shows also Hindu divisions in the Bombay Presidency.

For fuller general information readers are referred to the remarks made by Mr. Dracup in Chapter XII of the Census Report of Bombay Presidency, 1931, regarding the caste system, untouchability and other allied matters.

4 THE PRINCIPAL CASTES IN THE AGENCY

The statement below (No. 1) shows in summarised form the salient points in the caste distribution in the Agency as revealed by the 1931 Census.

STATEMENT No. 1

Caste	Strength	
	Males	Females
1	2	3
HINDU		
Brahman Audich	40,547	39,602
Lohana	50,156	50,336
Soni or Sonar	16,214	16,411
Vauli all castes	31,853	31,056
Ahir	66,083	61,675
Bharwad, Dhangar	88,258	82,248
Darji	21,718	22,848
Hajam	23,266	22,853
Kumbhar	64,532	65,100
Kharva	6,090	6,665
Koli all	248,226	233,059
Maratha and Kanbi	321,087	309,394
Lohar	20,910	20,527
Mali and Phul mali	5,837	5,187
Rajput	110,369	107,768
Sutar	27,707	27,422
Bhil	7,283	6,214
Bava or Bairagi	36,086	31,813
Charan	15,226	14,940
Khavas	11,621	11,909
Mochi	5,484	5,631
Vaghti	13,960	12,886
Bhangi	17,189	16,233
Koli Dhor	5,352	5,083
Mahar, Holiya	88,044	85,502
Meghwal	21,790	22,119

STATEMENT No. 1—contd

Caste	Males	
	Males	Females
1	2	3
MUSLIMS		
Muslims	4,281	4,452
Muslims	15,924	16,631
Muslims	34,778	32,949
Muslims	7,642	6,901
Muslims	8,494	8,070
Muslims	7,626	7,241
Muslims	6,142	5,720
Muslims	4,977	4,233
Muslims	13,251	12,470
Muslims	16,792	16,145
European—British subjects	120	77
European—Others	24	7
Anglo-Indians	229	140
Indian Christians	402	267
Hindu Advanced	308,406	276,193
Hindu Intermediate	1,133,487	1,133,838
Hindu Primitive	7,813	6,772
Hindu Other Backward	90,301	82,822
Hindu Depressed	182,380	170,360

The chief matters of interest that arise centre round the biggest castes. These are Marathas and Khatris (631,681) Kols (481,283) Rajputs (227,137) Mahars and Holvats (174,446) and Bharwads and Bhargavs (170,506). Between them, these five castes account for 52 per cent. of the total Hindu population of the Agency. They are all castes in which literacy is at a low level. The most numerously represented Muslim caste or tribe (both words are unsuitable) is the Memon with 79,788 persons. The Memons are generally an advanced and well-educated people and they must be responsible mostly for the satisfactory level of literacy displayed by the Muslims in the Agency. The other chief matters of interest in the statement above lies in the comparative numbers of the various sections of the Hindu community. It will be noticed that by far the majority of Hindus belong to the Intermediate class and that the Depressed Hindus, who number 318,320 or 10 per cent. of the total number

of Hindus, are about three quarters the number of the Advanced Class, who have been returned as 416,659 persons or 13 per cent. of the total Hindu population. Primitive tribes are not numerically important numbering only 14,690 or 0.5 per cent. of the total Hindu population. Other backward Hindus, who include such peoples as Bhavats or Barhats, Charvats, Khavats, Mochats and Vaghats, number 173,914 or 5 per cent. of the total Hindu population. The Census statistics relating to caste can be fully understood only by correlating the information in Imperial Table XVII with the statistics in the Imperial and Subordinate Tables compiled for the chapters on civil condition, occupation religion and literacy. A study of these statistics together will suggest to enquirers many useful conclusions and subjects for investigation which cannot be followed up in a general Census report. One of the most interesting subjects in this connection, which has been mentioned only casually in the present report, is the extent to which the various castes, where these are largely occupational, are departing from their traditional manner of earning a living. It has already been pointed out how in the case of the Chambhars a breaking away from the traditional occupation has led to a wider economic freedom and an advance in literacy. It is likely that other castes may show similar features, while some remain firmly rooted in their traditional mode of life. The

Kanbis and Marathas, who form so large a proportion of the agricultural population, are noted for their conservatism, part of which naturally takes the form of resistance to education. A Census report can do little more than suggest in this manner ways in which the statistics should be used. It cannot itself go deeply into such enquiries.

5 VARIATIONS IN CERTAIN CASTES

The statement (No 2) below gives some information regarding variations in the numbers of particular castes for forty years so far as the figures are obtainable.

STATEMENT No 2

Variations in certain Castes

Caste, Tribe or Race	Persons			Percentage of Variation				Net Variation percentage 1901 to 1931
	1931	1921	1911	1901	1921 to 1931	1911 to 1921	1901 to 1911	
1	2	3	4	5	6	7	8	9
Brahmin Audich	80,140	94,385	107,380	114,560	- 10	- 12	- 10	- 30
Lohana	100,402	87,710	92,284		+ 10	- 5		
Van (all castes)	62,009	51,020	63,460	180,587	+ 21	- 18	- 60	- 66
Ahir	127,708	122,444	110,504	102,731	+ 4	+ 5	+ 13	+ 24
Bharwad Dhangar	170,500	72,600	97,811	60,400	+130	+ 7	+ 12	+182
Kumbhar	120,012	107,445	100,102	94,882	+ 21	+ 7	+ 0	+ 37
Koli all	481,280	406,263	420,070	337,382	+ 18	- 5	+ 10	+ 35
Maratha and Kanbi	931,051		500,306	467,718			+ 7	+ 35
Kajput	227,137	102,122	180,077	170,400	+ 10	+ 3	+ 5	+ 20
Sutar	50,120	40,603	40,510	40,430	+ 18	+ 1	+ 2	+ 21
Bava or Bairagi	98,400	47,068	30,981		+ 43	+ 20		
Mahar	174,440	180,422	185,384	127,370	- 8	- 2	+ 46	+ 37
Memon	78,708	74,015	71,005	74,111	+ 5	+ 3	- 1	+ 6
Jain	201,620	180,610	63,480	210,314	+ 7	+100	- 70	- 3

Some of the results afforded by the above statement are interesting. If the statistics are accurate for the four Censuses, on which it is not wise to be dogmatic, they would seem to show a progressive decline in the number of Audich Brahmans. It would be interesting to know whether local experience confirms the Census figures and, if the Audich Brahmans are really becoming fewer, whether it is because they are becoming relatively less prolific or less long-lived, or whether they are migrating to places outside the Agency. The Census has no information on the subject. It will be noted also, a point of some interest to eugemists, that the poorer and more backward castes show a higher relative increase than do castes in a better economic position. Thus the increase in the number of Bharwads and Dhangars, and of Bhavas or Bairagis is much higher than that in the case of Lohanas and Vanis, and very much greater than that in the case of Jains and Memons. The Census figures in this matter can do little more than show the way to social investigators who may be willing to take the trouble and time involved in the prosecution of special local enquiries. It will be noted as a point of general interest that the increases in 1931 are in almost every case greater than in 1921 showing that the general increase of population has affected all classes of the population, the Audich Brahmans alone excepted. This is a point of great importance on which much valuable light might have been thrown by vital statistics, had these been available in the Agency. The present Census Report has made no attempt to deal with the difficult question of the ethnology of the Agency population. The present writer, apart from the fact that he has not the knowledge necessary for dealing with so difficult, complicated and little known a subject, is not convinced that a Census Report is the proper vehicle for such discussion. He does hope, however, that the statement of the Census statistics of caste herein set forth will be sufficient to stimulate those with adequate knowledge of Kathiawar and Cutch ethnology to carry their researches to a point whence definitely scientific results will emerge. The present report on the Census statistics of the Western India States Agency is a pioneer effort which, may it be hoped, will lead to worthier achievements hereafter.

Part II—Statistical Tables
Imperial and Provincial

IMPERIAL TABLE I

AREA, HOUSES AND POPULATION

WESTERN INDIA STATES AGENCY

1 (a) In column 5 the term " Village " means an inhabited Revenue village.

(b) The word " Town " in column 4 means places treated as towns and cities for the purposes of Imperial Tables, IV and V

2 In columns 6, 7 and 8 the term " Occupied Houses " means Census houses " House " is variously defined according to local condition But the tendency is to define a house as the residence of a commensal family Any building which contained a single individual on the Census night was treated as an " Occupied House "

3 The term " Urban " has been applied to persons enumerated in those places treated as cities or towns for the purposes of Imperial Tables IV and V " Rural " connotes population enumerated in all other places

IMPERIAL TABLE II

VARIATION IN POPULATION SINCE 1881

Note—Hitherto the figures for the Western India States Agency have been included in the Bombay Report and only those States that possessed a population of one hundred thousand and over were separately tabulated, all others being shown together as one unit. But as on this occasion, it was decided to prepare a separate Report for the Agency each and every important and major State has been treated as a separate unit, minor States and Thanas only being grouped together. Separate figures for each State for each decennium are not in some cases available.

TABLE II

IMPERIAL TABLE III

CITIES, TOWNS AND VILLAGES CLASSIFIED BY POPULATION

For the meaning of " Towns " and " Villages " in column 2 of this Table see remarks on Imperial Table I —

(1) Persons enumerated in encampments, boats, running trains etc., have been excluded from the total population before grouping the towns and villages into classes

(2) Residents of Station premises and persons enumerated on platforms are included in the population of the village or town in which the station is situated

(3) In the cases of the towns and villages the floating population, viz persons enumerated on board of vessels in the harbour, on small boats, on rivers, and along the coast, has been shown separately (*vide* column 20)

(4) Encampment means a cluster of huts or tents occupied by members of wandering tribes, who normally do not reside within the limits of a village

(5) There is no Cantonment in the Western India States Agency

CITIES, TOWNS AND VILLAGES

States and Agencies	Total Number of Inhabited Towns and Villages.	Population.	Under 500.		500-1,000		1,000-2,000

IMPERIAL TABLE V

CITIES AND TOWNS ARRANGED TERRITORIALLY WITH POPULATION BY RELIGION

Notes —(1) As the Cantonment areas of Rajkot Civil Station and Deesa have been abolished the resident population is included in the local Municipal areas

(2) The number of towns shown in 1921 remains unaltered, for additions to the list of towns see remarks on the fly-leaf of Table IV

IMPERIAL TABLE X—OCCUPATION

OCCUPATION OR MEANS OF LIVELIHOOD

Note 1 —The arrangement of this Table is based on the scheme of classification of occupation prescribed by the Census Commissioner for India

Note 2 —The Table gives the figures of earners and working dependants only for each group. It also shows for each group the number of persons who follow it as subsidiary occupation. Non-working dependants are not shown separately for each occupational group but their total number has been shown at the top for the whole Agency in Part I and for each individual State in Part II.

Note 3 —There are no entries in the case of the following occupational groups and these have been omitted from the Table —

Sub Class	Order	Group	Occupation
I	1 (a)	8	Cultivators of jhum, taungya and shifting areas
I	1 (b)	9	Cinchona
I	1 (b)	10	Cocoanut
I	1 (b)	11	Coffee
I	1 (b)	14	Rubber
II	3	33	Tin and wolfram
II	1	39	Precious and semi-precious stones
IV	18	101	Persons concerned with aerodromes and aeroplanes

PART I—Occupation or means of livelihood—General Table

Western India States Agency

Total Earners	1,053,358
Total Working Dependents	499,293
Total Non-Working Dependents	2,446,599
Total Population	3,999,250

IMPERIAL TABLE XI-A

OCCUPATION BY CASTE, TRIBE OR RACE

*OCCUPATION OF SELECTED CASTES, TRIBES
OR RACES*

WESTERN INDIA STATES AGENCY

The total of columns 6, 7, 10, 11, 14 and onwards in Part A of this Table falls short of the total earners and working dependents (Columns 3 and 4) by the number of working dependents, not shown in regard to the occupations other than the traditional. The details of these have separately been shown in Part B-II of this Table

OCCUPATION BY CASTE

OCCUPATION OF SELFOTFD

Western India

Caste, Title or Rank.	Traditional occupation.	POPULATION 1911 WITH		NUMBER OF EARLY-ADULTS 1911

IMPERIAL TABLE XX

NOTE

The figures in column 11, in regard to the units mentioned below, represent the density-figures of the States in question, calculated on the areas reported for 1921 which are different from the areas reported by these States in 1931

- (i) Thana Devli
- (ii) D S Vala Rawat Ram of Jetpur (Bilkho)
- (iii) Khairasra
- (iv) Wao
- (v) Rest of the Banas Kantha Agency

SUMMARY FIGURES

PROVINCIAL TABLE I

AREA AND POPULATION OF THANAS (TAHSILS, ETC)

As all the data available for insertion in this Table are already contained in Imperial Tables I and XX, this Table has been dispensed with for States in the Bombay Presidency and also for the Western India States Agency. Talukwar figures have not been compiled for States (any of the units in the Agency) nor is it possible to do so as the area of a Taluka, Thana or Tahsil is a variable quantity and may in some cases consist of a few villages only. Besides the larger states that had set up their own Abstraction Offices had stated that they themselves would extract any special figures they required.

PROVINCIAL TABLE II

POPULATION OF AGENCIES AND STATES BY RELIGION AND LITERACY.

- (1) There are no towns prescribed as Cities in the Agency.
- (2) This time Hindu, Jain and Animist (Tribal) have been shown separately instead of together as at the 1921 Census. Hindus are further sub-divided into (i) Brahmans, (ii) Other Hindus and (iii) Depressed Classes. Sikhs have been separately shown. Zoroastrians, Jews and Buddhists are included in Others. Literacy in English has been separately shown.
